

GHS SAFETY DATA SHEET (SDS)

SECTION 1 – PRODUCT AND COMPANY IDENTIFICATION

PRODUCT NAME: PART # 526 - Gun Roving

FIBRE GLAST DEVELOPMENTS CORP. 385 Carr Drive BROOKVILLE, OH 45309

TELEPHONE: (937) 833-5200 FAX: (937) 833-6555 FOR CHEMICAL EMERGENCY CALL (801) 629-0667 24 HRS.

RECOMMENDED USE: Industrial use, reinforcement of plastic

SECTION 2 - HAZARDS IDENTIFICATION

Regulatory Status

This product is not classified as hazardous according to OSHA HazardCommunication Standard, 29 CFR 1910.1200.

Continuous Filament Glass Fiber (CFGF) Products are Articles Articles which meet the definition of 29 CFR 1910.1200 (b)(6)(v) (a manufactured item other than a fluid or a particle: (i) which is formed to a specific shape or design during manufacture; (ii) which has an end use function(s) dependent in whole or in part upon its shape or design during end use; and (iii) which under normal conditions of use does not release more than very small quantities, e.g. minute or trace amounts of a hazardous chemical (as determined in paragraph (d) of this section), and does not pose a physical hazard or health risk to employees) are not regulated by OSHA HazCom Standard

Other Information

As manufactured continuous filament glass fibers are non-respirable. May cause temporary skin and mucous membranes itching due to mechanical abrasion effect of fibers. Under normal conditions of use, these products may release dust and non-respirable fibers (Particulates Not Otherwise Regulated). Under severe process conditions (e.g. shredding, crushing), these products may release very small amount of respirable particulate, some of which may be fiber-like in terms of I/d ratio (so-called "shards"). See Section 8 for Exposure Limit Data

SECTION 3 – COMPOSITION/INFORMATION ON INGREDITENTS

CFGF products are made of glass which is given a specific shape (filament) and dimension (filament diameter). A surface treatment (sizing) is applied to the filaments which are gathered to form a strand. The strand is further processed into a specific product design according to the downstream use of the article. The sizing is a mixture of chemicals, i.e. coupling agent, film former and polymeric resin/emulsion. The sizing content is usually below 3%

SECTION 4 - FIRST AID MEASURES

Description of First Aid Measures

Eye contact • DO NOT rub or scratch eyes

• Immediately flush with plenty of water. After initial flushing, remove any

contact lenses and

continue flushing for at least 15 minutes

• If eye irritation persists: Get medical advice/attention

Skin contact• Wash off immediately with soap and plenty of cold water

• DO NOT use warm water because this will open up the pores of the skin,

which will cause

further penetration of fibers and dust

• DO NOT rub or scratch affected area

· Use a wash cloth to help remove fibers and dust

• If fibers are seen penetrating from the skin, the fibers can be removed by

applying and

removing adhesive tape so that the fibers adhere to the tape and are pulled

out of the skin

• If skin irritation persists, call a physician

Inhalation • Move victim to fresh air

· If symptoms persist, call a physician

• Rinse mouth with water and drink water to remove fibers from the throat

If symptoms persist, call a physician

SECTION 5 - FIRE FIGHTING MEASURES

Flammable properties • C

• Continuous Filament Glass Fiber products are not flammable, are incombustible and donot support combustion. Only the organic part is combustible and could release small quantities of undetermined hazardous

substances in case of major and prolonged heat or fire

Suitable extinguishing media

• Use CO2, dry chemical, or foam

Water spray or fog

Protective equipment and precautions for firefighters

 As in any fire, wear self-contained breathing apparatus (SCBA) and full fire-fighting protective gear

SECTION 6 – ACCIDENTAL RELEASE MEASURES

Personal precautions

Avoid contact with eyes and skin

· Avoid creating dust

• Use personal protections recommended in Section 8

Methods for cleaning up

Avoid dry sweeping

Avoid creating dust

• Take up mechanically, placing in appropriate containers for disposal

· Pick up and transfer to properly labeled containers

• Use an industrial vacuum cleaner with a high efficiency filter to clean up dust

and fiber contamination

· After cleaning, flush away traces with water

SECTION 7 - HANDLING AND STORAGE

Precautions for safe handling

- Prevent and/or minimize dust formation
- Wear appropriate personal protective equipment in case of direct contact

with the product

Storage Conditions

• Keep product in packaging until use to minimize potential dust generation

Incompatible materials

None known

SECTION 8 - EXPOSURE CONTROLS / PERSONAL PROTECTION

Exposure Guidelines

As manufactured continuous filament glass fibers are non-respirable. May cause temporary skin and mucous membranes itching due to mechanical abrasion effect of fibers. Under normal conditions of use, these products may release dust and non-respirable fibers (Particulates Not Otherwise Regulated). Under severe process conditions (e.g. shredding, crushing), these products may release very small amount of respirable particulate, some of which may be fiber-like in terms of I/d ratio (so-called "shards"). You may find here below some occupational exposure limits for Respirable dust, Total dust and Respirable Fibre

Chemical name	ACGIH TLV	OSHA PEL	NIOSH REL
Continuous filament glass	TWA: 1 fiber/cm3 respirable	-	-
fiber, non-respirable	fibers: length >5 µm, diameter		
-	less than 3 µm, aspect ratio		
	>=3:1, as determined by the		
	membrane filter method at 400-		
	450X magnification [4-mm		
	objective], using		
	phase-contrast illumination		
	TWA: 5 mg/m³ inhalable		
	particulate matter		

OSHA PEL: TWA for Inert or Nuisance Dust are: 5 mg/m3 (Respirable fraction) and 15 mg/m3 (Total dust)

Engineering Controls Provide local exhaust and/or general ventilation to maintain exposure below regulatory and

recommended limits Local exhaust ventilation should be provided at areas of cutting,

milling or other similar processing to remove airborne dust and fibers

Individual protection measures, such as personal protective equipment

Eye/face protection • Wear safety glasses with side shields (or goggles)

Skin and body protection • Wear protective gloves

Wear long-sleeved shirt and long pants

Respiratory protection• If exposure limits are exceeded, wear appropriate respiratory

protections (e.g.: FFP2 or N95 or KN95) to be chosen according to the actual airborne exposure level and in accordance with applicable local

regulations

General Hygiene Considerations • Wash hands before breaks and immediately after handling products

• Remove and wash contaminated clothing before re-use

SECTION 9 - PHYSICAL AND CHEMICAL PROPERTIES

Physical state Solid

Appearance Continuous filament glass fibers, with filament diameter larger than 6 micron

Odorless Odorless

ColorWhite, or, Off-whiteWater solubilityInsoluble in water

Softening point > 800°C; > 1500°F (glass)

Density 2.6 (glass)
Explosive properties Not an explosive

SECTION 10 - STABILITY AND REACTIVITY

Stability • Stable under normal conditions

Possibility of Hazardous Reactions • None under normal processing conditions

Hazardous Decomposition Products • None under normal use conditions

Small quantities of undetermined hazardous decomposition products may

be released in case of heat exposure or during a fire

SECTION 11 – TOXICOLOGY INFORMATION

Product Information

Dusts and fibers may cause temporary skin and mucous membranes itching due to mechanical abrasion effect of fibers. Mechanical abrasion is not considered as a health hazard in the meaning of the UN Globally Harmonized System of Classification and Labeling of Chemicals (GHS). Inhalation may cause coughing, nose and throat irritation and sneezing. High exposures may cause difficult breathing, congestion and chest tightness Continuous filament glass fibers are not respirable according to the World Health Organization (WHO) definition. Respirable fibers have a diameter (d) smaller than 3µm, a length (I) larger than 5µm and a I/d-ratio larger than or equal to 3. Fibers with diameters greater than 3 microns, which is the case for continuous filament glass fiber, do not reach the lower respiratory tract and, therefore have no possibility of causing serious pulmonary disease. Continuous filament glass fibers do not possess cleavage planes which would allow them to split length-wise into fibers with smaller diameters, rather they break across the fiber, resulting in fibers which are of the same diameter as the original fiber with a shorter length and a small amount of dust. Microscopic examination of dust from highly chopped and pulverised glass demonstrated the presence of small amounts of respirable dust particles. Among these respirable particles, some were fiber-like in terms of I/d ratio (so-called "shards"). It can be clearly observed however that they are not regular shaped fibers but irregular shaped particles with fiber-like dimensions. To the best of our knowledge, the exposure levels of these fiber-like dust particles measured at our manufacturing plants are of the order of magnitude between 50 to 1000 below existing applicable limits

ACGIH (American Conference of Governmental Industrial Hygienists) Carcinogen

Continuous filament glass fibers are classified as A4 - Not Classifiable as a Human

IARC (International Agency for Research on Cancer)

The International Agency for Research on Cancer (IARC) in June, 1987, and in October, 2001 (see IARC Monographs on the Evaluation of Carcinogenic risks to humans -Man-made Vitreous Fibers - Volume 81), categorized continuous filament fiber glass as not classifiable with respect to human carcinogenicity (Group 3). The evidence from human as well as animal studies was evaluated by IARC as insufficient to classify continuous filament glass fiber as a confirmed, probable or even possible cancer-causing material

NTP (National Toxicology Program) Continuous filament glass fibers are not listed in the National Toxicology Program (NTP) Report on Carcinogens (latest edition)

OSHA (Occupational Safety and Health Administration of the US Department of Labor)

X - Present

Classification according to

Continuous filament glass fibers are not listed in the Table of harmonized classification Regulation (EC) No. 1272/2008 [CLP]entries in Annex VI to CLP Regulation.

> Mechanical abrasion is not considered as a health hazard in the meaning of European Regulation 1272/2008 (CLP).

SECTION 12 - ECOLOGICAL INFORMATION

This product is not expected to be hazardous for the environment

SECTION 13 - DISPOSAL CONSIDERATIONS

Continuous filament glass fiber waste is a non hazardous waste. Disposal should be in accordance with applicable regional, national and local laws and regulations

SECTION 14 - TRANSPORT INFORMATION

These products are not classified as dangerous goods according to international transport regulations

SECTION 15 - REGULATORY INFORMATION

International Inventories Continuous filament glass fiber products are articles. Articles are exempted

from registration or listing under chemicals inventories like TSCA (USA),

DSL/NDSL (CAN), REACH (EU), ENCS (JP), IECSC (CN), KECL (KR), PICCS

(PH), AICS (AUS), TCSI (Taiwan)

California Proposition 65 This product is not regulated under California Proposition 65
