

How do I find the BCM software release using Unified Manager?

BCM 200, 400 & 1000 systems installed **prior to January 2007** used Unified manager software.

You cannot find your BCM software release version using telephony programming.

Unified Manager can be opened directly from the PC. There may be a shortcut icon on your Desktop or from the Start Menu.

- Open the Unified Manager application, from the opening screen, click on the Configure link.
- When the Configuration Login page opens up, it shows a picture which has your software release number eg Business Communication Manager 3.6

If you access your BCM using **Element Manager** on your PC - or your system was installed after January 2007 - please visit our BCM 4.0 pages to learn how to find your software version.
