

## Tech Article: How to Reset your MOATES OSTRICH using TunerPRO RT Software

First, goto the TunerPRO website and download TunerPRO RT

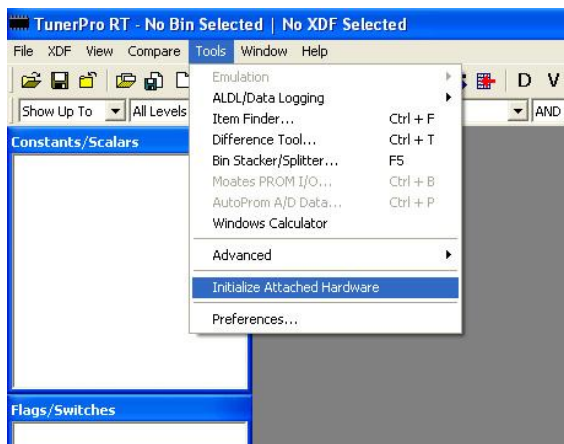

<http://tunerpro.net/downloadApp.htm>

Install the program on your computer.

Next, plug in your Ostrich Emulator, listen for the trademark “beeps” to be sure the computer recognizes the hardware has been plugged in.

Start TunerPRO RT and wait for it to load, it will load after 10 seconds or you can register your version and help the software maker out. Click continue.

Goto TOOLS → Initialize Attached Hardware

Once the initialization is complete, TunerPRO will beep at you and you are all done.

Connect it back to your software as you normally would.

You are DONE!

Happy Tuning,

Chris
