

How to enable document logs

To troubleshoot a reload failure it is useful to analyse document logs.

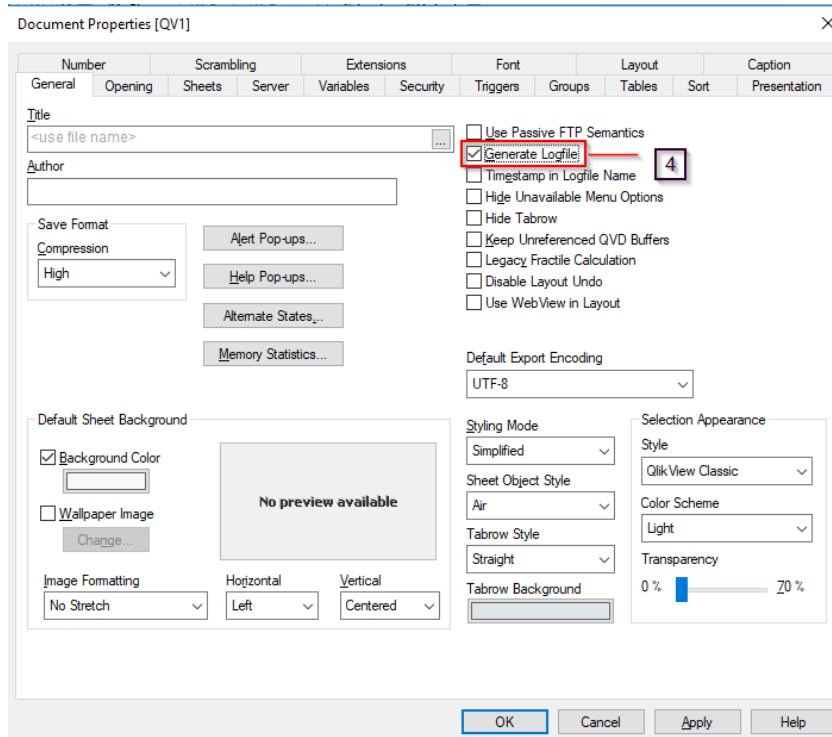

- 1- Open the QlikView document (.qvw file) in QlikView Desktop.
- 2- Select Document Properties under Settings

- 3- Select General Tab

4- Tick 'Generate Logfile' and then click 'OK'

Reload the document and once reload completed, this would create a log file (DocumentLog.txt) under
 C:\ProgramData\QlikTech\DistributionService\1\Log\YYYYMMDD*task start time* - *TaskName*
