

Dear Parent,

This year we'll be using a program called eSpark. eSpark is an online computer program that helps students learn and practice skills in math and reading. We're especially excited to use eSpark because everyone will be able to work on lessons that are chosen specifically for them where they will learn new things through fun videos and online activities.

Each week we'll have time in our schedule for students to use eSpark. While they're eSparking, I'll be able to check in with them in small groups or one-on-one to teach new skills and celebrate their progress.

High fives to our students and another year of success!

Sincerely,

Q: What does eSpark look like?

A: When students log into eSpark, they are guided through a series of "quests" that teach specific skills. Videos introduce and teach the new skill, then students practice with fun games and activities. At the end of each quest, students create a video to show all that they've learned!
