Component Version

The following table lists the components of Ecollect and the most recent version contained within this release:

Component:	Version:
Ecollect Platform	5.6.7 (or 4.11.7)
Ecollect Enrollment	2.3.0
Ecollect Essentials	1.0.1
Ecollect Student Support	1.3.0
Ecollect Teacher	1.6.0
Ecollect Subscription Manager (installed separately)	4.1.1 (required)

Installation Notes

The Ecollect application can be upgraded via the subscription manager (system>Ecollect>subscription manager). Click on the upgrade/install button to begin the process. Contact AccelaSchool Support to obtain a valid token: support@accelaschool.com

Installation/Upgrade	
Installed Version of Ecollect	3.5.5
Latest Version of Ecollect	3.5.5
Install/Upgrade	

Ecollect Installation/Upgrade

Please enter a valid access token. It is recommended that upgrades be performed at a time when the PowerSchool application can be restarted once the process completes.

To obtain an access token, call AccelaSchool support at 1-877-297-8029 or email support@accelaschool.com

Progress: Pending Access Token Authentication

[Cancel](#) [Install](#)

NOTES:

- o PowerSchool version 12.0.0 or higher is required for Ecollect version 5.0+. Users on lower versions of PowerSchool will update to version 4.X of Ecollect.
- o **Subscription Manager must be upgraded to version 4.1.1 prior to installing Ecollect.** The updated Subscription Manager plugin can be downloaded here: [Subscription Manager](#)
Note: Prior version of subscription manager will no longer permit Ecollect updates. Version 4.1.1 is required.
- o It is recommended that the installation of Ecollect coincide with a system restart. **Ecollect functionality will be impaired between the installation of Ecollect and the PowerSchool application restart.**

New Features

Feature:	Description
Approval workflow improvements.	Pending responses are now set to be read only. This prevents approvers (admin users) from attempting to edit the response prior to approval. Previously, those edits would not have saved with the approval submission. This change better imposes the intended approval workflow.
Multi-language settings.	Users are now not presented the language preference or form preference unless the district has configured languages to be available.

Resolved Issues/Bug Fixes

Issue:	Resolution:
Response Reports not showing at the district office in some cases. (5.6.1)	Response reports now display more consistently at the district office for users.
Element choice translations were removed after the multi-language dialog was reopened. (5.6.2)	Translations can now be added to choice-based elements as intended.
DBLog records were not being properly removed leading to increased table size over time. (5.6.3)	The Ecollect installation now removes these records and the new version prevents their creation.
Next form failed to load when approval was enabled on current form. (5.6.4)	The next form designated loads regardless of approval settings on either form.
PS tags failed to display data after form reload. (5.6.4)	Data flow to the PS tags has been corrected to prevent the data disappearing.
Single line element size always displayed as "large" in edit mode. (5.6.4)	The Single line text element's size rendering has been corrected to reflect the size selected on the element properties.
Workflow on double-dependency elements was not displaying elements correctly. (5.6.4)	Elements whose visibility is set to workflow to an element with workflow now only display when the master element is visible.
Large forms/forms with many choices did not hold translations entered by user when opened for edit. (5.6.4)	Forms now hold previously entered translations as expected.
Large forms with many choices/translations could cause significant performance degradations. (5.6.5)	Query optimization has improved performance for forms with many choices/translations.
Forms utilizing double dependency workflow did not render elements correctly causing visible elements to not store data on form submit. (5.6.5)	Workflow has been adjusted to account for double dependency element visibility. Users are now consistently presented the correct elements and data is submitted for those elements.
Forms set to global admin visibility within customized portal settings did not allow view of response report to user logged in to the school level. (5.6.5)	The response report has been adjusted to allow correct form visibility to all users.

Category completion report included responses that contradicted form reset settings. (5.6.6)	The report now honors the form reset settings.
Category completion report did not include the student/teacher number for reference. (5.6.6)	This column has been added to the report for easier user reference.
Individual response type form responses were not visible to admin users via the response report link. (5.6.7)	Responses loaded via the link on the response report now display the response data to admin users for review.
Response reports fail to load at school level for some users. (5.6.7)	The response report loads consistently at both the school and district level as expected.
Submitting/Approving form generated an error that DBlog records were not present. (5.6.7)	The submit/approve process completes as expected.
Submitting/Approving contacts when “apply contact to” was used caused errors. (5.6.7)	The “apply contact to” feature works as expected.
Applying contacts to other students via the parent portal overwrote check marks not included/visible on the element. (5.6.7)	The contacts sharing now applies “Lives with,” “receives mail,” and “can pick up” when those elements are editable on the element to parent users.
