

# Release notes 2.5

*Production release date 02/24/2019*

*N2N announces the release of Illuminate 2.5.0. This release contains major enhancements, user interface changes, infrastructure updates, and bug fixes. The following updates are included within this release.*

*Unless otherwise specified, all the changes are applicable for all available Illuminate subscription plans.*

## What's New

- New and improved Client and Consumer onboarding designed to help N2N staff speed customer deployment
- New and improved Illuminate authorization API
- Modo Labs Xmodule compatibility API

## Improvements

- Numerous internal enhancements to N2N staff functions to improve the speed and accuracy of deployment
- Licensing information included in the Certified Builds in marketplace (full license, trial license, etc.)
- Added additional UI to API logs module to provide drill-down capabilities for the transaction. The new detail window provides detailed information on transaction headers (metadata).
- Updated Execute Procedure APIs with pre and post transformation options, previously only available for Endpoint APIs

## Fixes

- API library
  - ◆ Fixed an issue where an user with Read Only access was unable to see APIs
  - ◆ Data tables UI fixes for various screens
- API Builder
  - ◆ Fixed issues related to consumer authorization
- Endpoint
  - ◆ Fixed issues with API editing
  - ◆ Fixed an issue where Endpoint URL wouldn't accept the port number in URL
- Signup

- ◆ Fixed error messages during registration
- Fixed issue with FTP provider details showing as empty in view screens
- API Logs UI fixes
  - ◆ Connections bug fixes
  - ◆ Dashboard count fixes
- Scheduler bug fixes related to job counts
- Fixed navigation breadcrumbs throughout the application
- Additional under the hood improvements to enhance platform SLA compliance
