

EnergyGauge USA 5.1.02

Release Notes

The latest release of EnergyGauge USA, Version 5.1.02 includes fixes to three issues recently identified.

KEY FEATURES ADDED

None

WINDOWS VERSIONS SUPPORTED

Minimum System Requirements: Windows Vista, Windows 7, Windows 8, Windows 8.1 or Windows 10.

GENERAL BUG FIXES

- Temperature data is no longer intermittently deleted when new projects are created
- File Not Found error message no longer displays during calculations on computers that experienced this error

FLORIDA CODE FIX

- The reference home for the R405 Performance calculation, is changed to an envelope air tightness of 7 ACH50 from 5 ACH50. This was reported changed in 5.1 release notes but we learned that the installation package failed to implement the change. Because of this fix, we highly recommend all Florida users to update to this version.

HERS RATERS CHANGES AND OTHER FEATURES

- None
