Installing a license to your Appronto module(s).

The process contains two main steps:

1. Customer provides Appronto the Mendix (cloud) URLs of each environment of the application
2. Appronto returns a license code for each environment.

To get through this process the following steps are needed:

1. Send us an e-mail to support@appronto.nl with your environment URL's (test, acceptance, production) eg: https://yourenv-accp.mendixcloud.com
2. Appronto will send you the license codes back.
3. Add the license code into the `LicenseToken` environment constant, which is within the module.
4. Make sure the `ActivateProduct` microflow is added to the **After startup** microflow, this is also described in the installation instructions of the module.

Additional step for Document Generation for Mendix

1. Together with the license code you will also receive an `Aspose.Words.lic` file.
2. Add this file to root of the `/resources` folder in the Mendix project folder.
3. Visit our solution portal for the documentation of the module: https://appron.to/doc-docgen

Additional step for Virus Scan for Mendix

1. Together with the license code you will also receive an API-key and Secret
2. Add the API-key into the `APIKey` environment constant, which is in the folder `Constants.`
3. Add the API-key into the `Secret` environment constant, which is also in the folder `Constants.`

Support

Appronto provides Support on the modules via our Support portal (https://support.appronto.nl). Your technical contact will be activated and receive an invite for our portal.
