

Release R73

Released: 9th April 2018

Organisation Portal

Enhancements

The following enhancements to existing functionality have been added to the Organisation Portal:

- An enhancement has been added to the system to provide better and more accurate help content to the dynamic reports.
This enhancement can be accessed at Organisation Portal > Workers > Reports and Organisation Portal > Positions > Reports and Organisation Portal > Associations > Reports
- An enhancement has been added to the system to log users logging in and out to the TikForce Organisation Portal.
This enhancement can be accessed at Organisation Portal > Dashboard
- In the Organisation portal, whenever an Admin or Manager is on a page that shows the worker's basic details panel, the name of the worker can now be clicked to go to their full details page.

Bug Fixes

The following bugs have been fixed to the Organisation Portal:

- The search bar in the header of the Organisation Portal is now not case-sensitive.

TikForce Positions Application

Enhancements

The following enhancements to existing functionality have been added to the TikForce Positions Application:

- When a user completes an induction, the system only verifies it if the user's verification has been Verified. If not, the induction is set to In Progress and processed later.

Bug Fixes

The following bugs have been fixed to the TikForce Positions Application:

- An issue with users being able to complete an exempted position multiple times was fixed. This workflow has been enhanced and will now redirect the users of an exempted position to the position status page instead of the position index page. From the status page the users are given a link to go back into the position to re-upload their credentials. They will then need to click the complete button once again to re submit their new documents.

TikMe Application

Bug Fixes

The following bugs have been fixed to the TikMe Application:

- An issue with the validation error for invalid email addresses not displaying was fixed. If a user trying to sign in now inserts an invalid email address into the email field, an appropriate error will display.

Single Sign On System

No changes were made to the Single Sign On System.

Verification Portal

No changes were made to the Verification Portal.
