

NG A360 Standards and Naming Conventions

Isaiah Nyabuto, Bram PIOT

12/18/2019

Organization Units

States are identified by:

- A precise name followed by the code in brackets: **Full name ([code])**¹
- A short Name – the precise name without the code²
- A standard code preceding with the country code, without spaces and separated by an underscore **NG_[code]**.³

¹ Example; **Abia State (ab-01)**

² Example; **Abia State**

³ Example; **NG_ab-01**

LGA are identified by:

- A precise name followed by a code in brackets. The code this case is an extension of the state in a following order: **Full name ([code])**⁴
- A short Name⁵
- A standard code preceding with the country code, without spaces and separated by an underscore: **NG_[code]**⁶

⁴ Example; **Aba North Local Government Area (ab-01-01)**

⁵ Example; **Aba North Local Government Area**

⁶ Example; **NG_ab-01-01**

Wards are identified by:

- A precise name followed by a code in brackets. The code this case is an extension of the LGA in a following order: **Full name ([code])**⁷
- A short Name⁸
- A standard code preceding with the country code, without spaces and separated by an underscore: **NG_[code]**⁹

⁷ Example; **Asaokpulo Ward (ab-01-01-01)**

⁸ Example; **Asaokpulo Ward**

⁹ Example; **NG_ab-01-01-01**

A360 sites are identified by:¹⁰

- A precise name of the clinic followed by a code of the clinic in brackets. **Full name ([code])**. The clinic code begins with a key word A360 followed by the clinic number and separated by an underscore.¹¹
- A short Name: ¹²
- A standard code preceding with the project, without spaces and separated by an underscore.¹³

¹⁰ NG A360 Guide to Creating clinics in DHIS2

¹¹ Example; **Dawodu PHC (A360_180)**

¹² **Dawodu PHC**

¹³ Example; **A360_180**

Metadata

All the project metadata precede with the **NG RH A360**. These includes, indicators, data elements, option sets e.t.c. All analytics (favorites and dashboards) should be prefixed with **NG A360**, though most if not all of them are using **NG FP A360**.

Objects beginning with **NG FP A360**, are deprecated and should be renamed accordingly.
