AERIES CON

VIRTUAL SUMMIT

566 – What's New in Aeries – Deep Dive

Camden Iliff

VP of Product Development

Kevin Praeger

Core Product Manager

Introduction

This session will dig into 4 major new features of Aeries.

Most major new features are already included in their respective sessions throughout the conference. As a result, this session focuses on features that are not otherwise discussed in detail in another session.

Grading Periods

Gradebook Grading periods allow individual marking periods to be stand-alone grading periods within a semester rather than grading periods with a running average for the entire semester in a teacher's gradebook.

The desired amount of grading periods for the semester can be added and can include a separate grading period specifically for a final exam or final assignment. Each grading period can be assigned a specific weight for the semester. Each grading period is then averaged together to get the semester average and grade. Teacher gradebooks can also be linked to grading periods rather than to a regular semester or gradebook term.

Split Sections by Cohort

Split Sections by Cohort can duplicate sections and move students based on defined student cohorts. These cohorts can be defined by any STU, SUP, or SSD field. New sections are also created based on the selected values in those fields. For schools using Class Calendars, the new sections can have a defined Class Calendar based on each selected value. Each section can have the Class ID populated with the original Section Number for use in our APIs. There is also the ability to define Section(s) to Exclude from the process.

Single Column Transcript

The new Single Column, Enhanced Transcript was designed to meet the increasing need to include more information on student transcripts. The old, 3-column transcript restricted the amount of space available to display information about a course completion and did not have sufficient room to display additional information related to student graduation.
