How is kgLW/Ha Calculated?	1

What is kgLW/Ha?

This is kilos of live weight of animals grazing on the grass wedge on a per Ha basis.

This is particularly useful for beef and sheep farmers.

How is kgLW/Ha Calculated?

Let's use an example of different stock types grazing on a 25 Ha area.

Number	Stock Type	Live weight/head (kg)	Total live weight (kg)
50	Suckler cows	500	25,000
50	0-6 month olds	100	5,000
25	1-2 years olds	400	10,000
Total live weight (kg)			40,000
Total area measured (Ha)			25
kgLW/Ha is			1600
