

VI. Interpreting the “Talent Sourcing Report” (1)

created by clicking the button “Generate Report”

“Search Definition”

The terms used to create the following results.

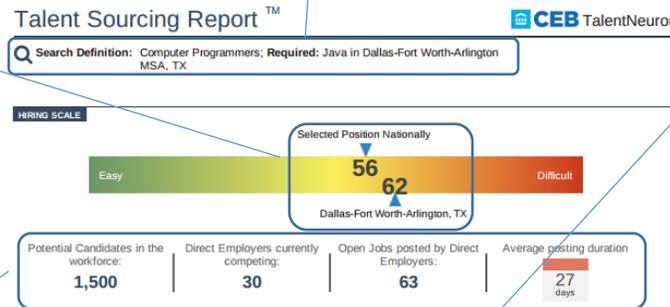

“Hiring Scale”

Helps set expectations of hiring time.

Shows the impact of hiring requirements have on the difficulty to fill. (Change the requirements, change the hiring difficulty, present to Hiring Manager, decide what is essential and what is optional.)

“Market Salary”

Are you offering too much? Too little? Would it be better to add a salary (or not)? Will it give us an edge?

SOME Reasons behind the “Hiring Scale”

Helps set expectations of hiring time. Gives reasons for difficulty.

Too low candidate supply? Adjust requirements? Search elsewhere?

Shows the impact of hiring requirements have on the difficulty to fill. (Change the requirements, change the hiring difficulty.)

“Job Titles”

What other search titles can I use to find candidates? (in social media sites, resume databases, searching . . .)

Should I give the posting a more popular title to increase hits?

Encourage a hiring manager to focus on the skills of a candidate, not on the title which may vary dramatically.

“Candidate Supply”

Shows the impact of the hiring requirements on the talent pool size.

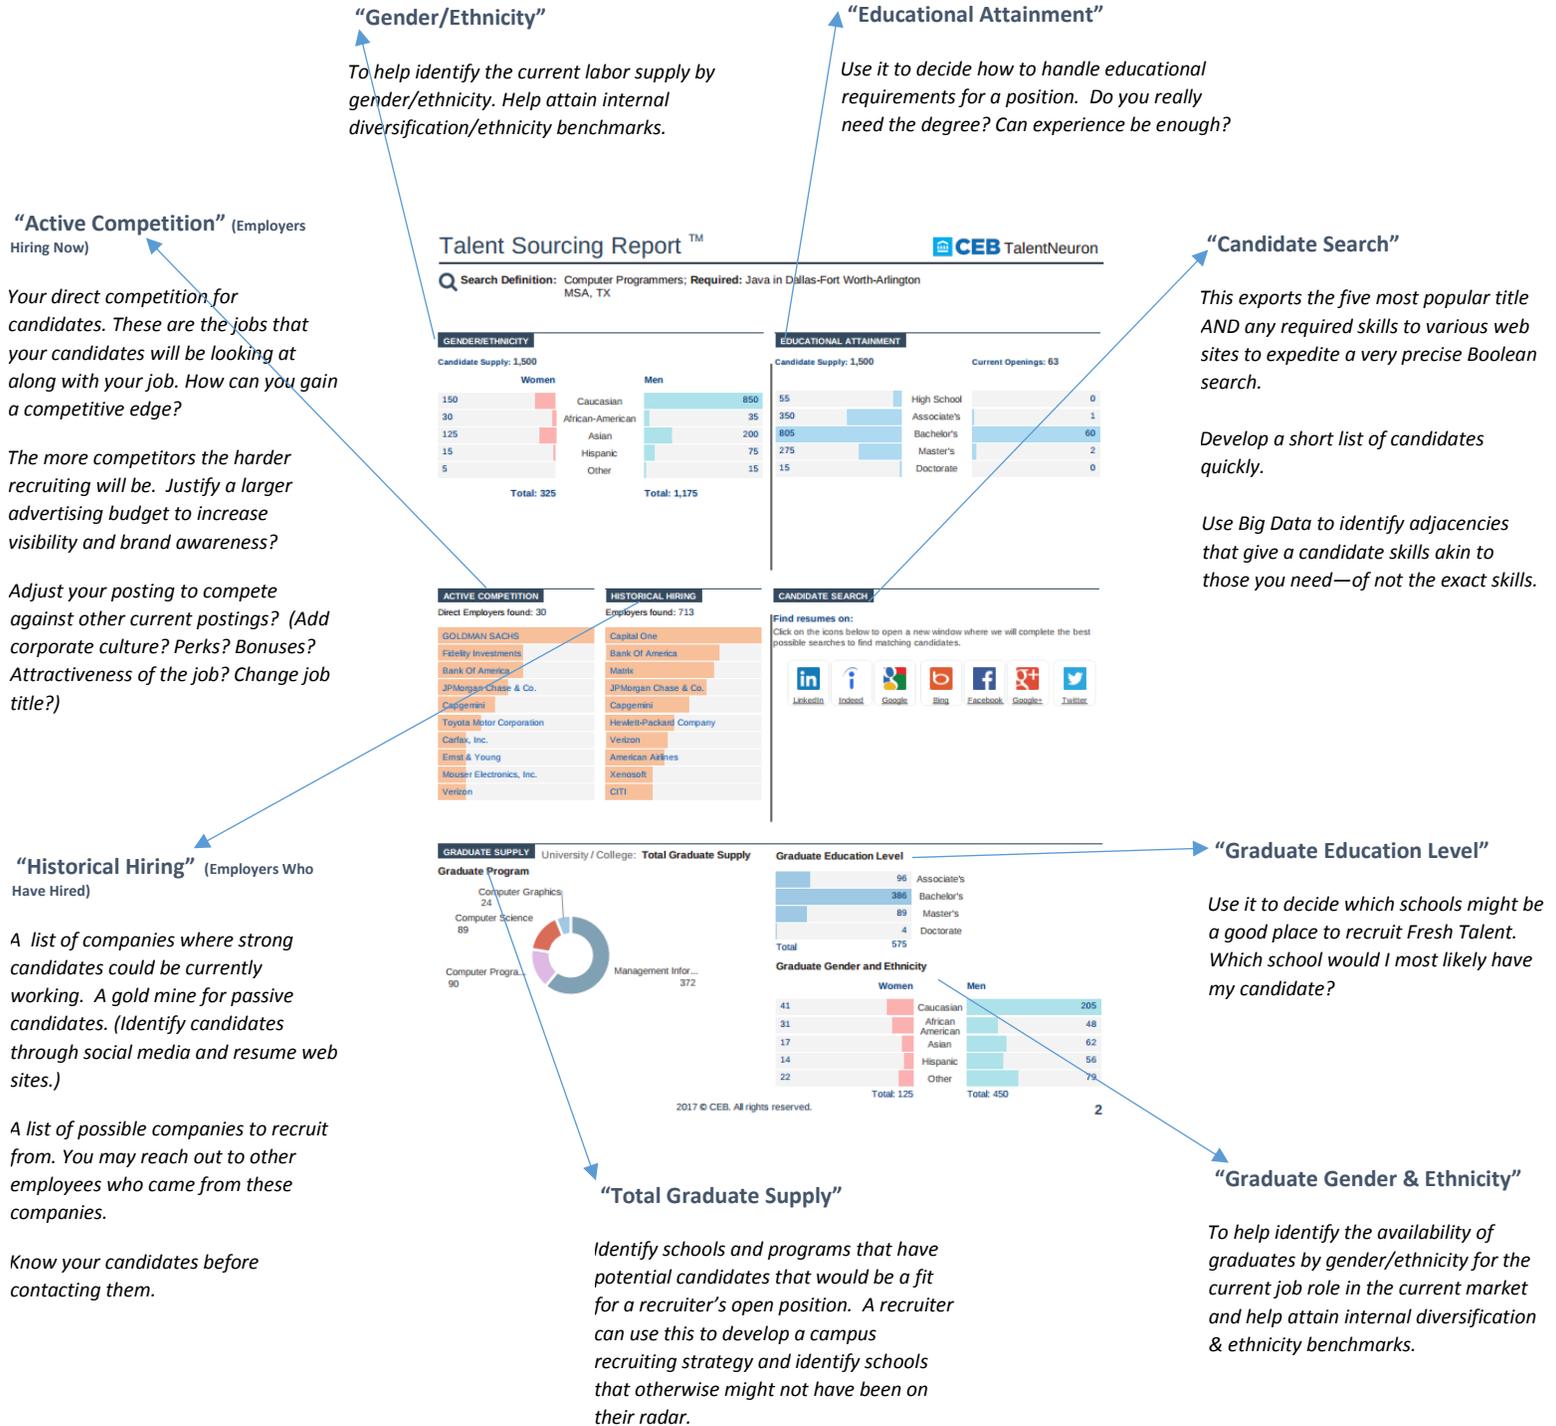

To make this clearer, a recruiter can run multiple searches using different requirements to show the effect the changes would have on the number of available candidates.

Few candidates? Should I recruit elsewhere? Locate the job elsewhere?

“Skills & Certifications”

Compare a recruiter's job description to ... their competitors are looking for in their candidate. Should we modify the description to improve hits? To broaden the candidate pool? Are there adjacent and over-lapping skills or competencies that we can search for? What skills can a prospect obtain AFTER he/she arrives?

Interpreting the “Talent Sourcing Report” (2)

Interpreting the “Talent Sourcing Report” (3)

“Candidates Locations” & “Hiring Heat Map”

(These are the same data represented in two different ways.)

To help identify alternate locations where a recruiter might

- Post the job and actively recruit in the area
- Have an easier time finding a candidate for their current job role based on current market conditions.
- Can we locate the talent in another office?
- Search for places with low “Hiring Scale” but high “Candidate Supply”.
