## DRTrack 2019.3.2 Release Highlights

This document briefly outlines items included in the DRTrack 2019.3.2 software update. DRTrack releases and updates are cumulative, meaning they include all items from previously released versions in the same numbered series and any changes and updates completed since the last update in the same series. The last update in this series was DRTrack 2019.3.1 (Oct 2019).

## New Items Added in This Release

<b>Category</b>	<b>Service</b>
Route	Modified the Unlock Orders page to allow edit of the number of pages to show.
Calendar/Unloaded Orders	Users can determine how many pages of results should be returned when searching for unlocked orders.

## Issues Resolved in This Release

<b>Category</b>	<b>Service</b>
Dispatch/Unloaded Orders	Resolved the issue with the Country field (Stop File) defaulting to the US when importing orders from DRTrack into DirectRoute.
Web Service	Modified and corrected sync services to correct an issue that caused any devices moved from a branch to revert back to the MAIN branch overnight.
Web Service	Rectified the issue preventing an estimated stop arrival time from updating (on orders projected for the next day) correctly when a driver gets ahead.
	Corrected issue causing a mismatch of the route number in DRTrack and the DispatchID in Peoplenet when a route is exported to Peoplenet.
