

# LEDA-W Voltage-Light power Relationship

The light power in CONST mode is about half of TRG mode at the same voltage, for safety reason.

In TRG mode, if you use over 12V, we recommend you to use pulses with width less than 1 second, duty cycle less than 1/10.

Please see the LAD-1 manual, section 4 and 5 for details about voltage, light power and heat relationship.

\* Measured by LPM-100 Light Power Meter, 470nm mode
