1.1. Installation of SIM card

The SIM card slot is on the upper right side of the back of equipment. According to the instructions, first remove the cover of the slot, then carefully put the SIM card downward into the slot, only then close the cover of the slot. The installation is finished.

Please note that this equipment supports only Micro-SIM card.

1.2. Charging method

The four hard contacts of the charging clip should correspond to the four hard contacts of the equipment. Press the charging clip to ensure that it is closely attached to the back part of equipment, and then use the USB cable to connect the charging clip to the computer or adapter for charging. When the clip is not charging, take out the clip in the vertical direction. Please avoid the sliding method, because you can easily cause damage to the four hard contacts located on the clip.

Note: When the automatic screen lock key is in the open position and the mobile phone is not used for the long time, the screen can be blocked. In the closed (off) position the screen does not have automatic blocking function.

3.1. Standby interface

In the stop mode of the equipment, long press of ON/OFF key can turn the phone on, then you can enter the standby mode. Status bar of the standby interface shows the Internet signal, battery capacity, message notification icon if your short message is not read. In the case of turning Bluetooth on a Bluetooth icon will be shown on the screen. In the middle part of the standby interface there is current time. If you press the up or down buttons to select menu item in the standby interface, you can select the menu functions.

3.2. Unlock the screen

When the screen is in the locked mode, press ON/OFF key and then # key simultaneously to unlock. If it is necessary to lock the screen, also press ON/OFF key and # key simultaneously.

3.3 Use of dialing function Direct dialing

For direct dialing in the standby interface, please use the digital input of the desired telephone number for outgoing call, if the device is equipped with SIM card, it is possible to use GSM dialing button for the outgoing call. If the smartphone Bluetooth is connected, it is possible to use Bluetooth dialing button for the outgoing call (the smartphone should be equipped with SIM card, for connecting Bluetooth please refer to section 4.3. Bluetooth). If there is an error in the input number, it is possible to use the delete key located in the upper part of the keyboard to delete the incorrect number.

4.1. Music player control

When the equipment and smartphone Bluetooth are connected, you can use the control function for playing music (please note that this function is only control one, it can control the smartphone playing or stopping the music, has the function to play previous or next song).

4.1.1. Use of the menu functions for playing music

In the main menu interface for controlling music reproduction press OK key to access the music control function, then using the selection button (up) and selection button (down) you can select the required function. The square choice box located in the interface can be removed in the left or right side and stopped on the interface of your required function. Press OK key to confirm.

Main menu for music control

Previous song – Pause – Next song

Previous song – Play – Next song

4.2. Sound recording. Start

In the main menu interface for recording press OK key to access the recording function, then using the selection button (up) and selection button (down) you can select the required function. The square choice box located in the interface can be removed in the left or right side and stopped on the interface of your required function. Select the record key to start recording.

Save recording/pause/reject recording

During the process of sound recording the time-reckoning interface can be popped out. At that moment press OK key to open interface with the following functions: «Save, pause, reject the sound recording», then using the selection button (up) and selection button (down) you can select the required function. The square choice box located in the interface can be removed in the left or right side and stopped on the interface of your required function. Press OK key to confirm the selection. If you want to continue sound recording, please select the record key to continue recording.
