## Enrolment using DEP

Apple's Device Enrollment Program (DEP) can help you simplify the initial setup and deployment of your devices in Impero Edlink.

Apple DEP is the best way to enroll newly purchased devices. Apple DEP allows you to preconfigure the setup experience on devices. When devices are unboxed and turned on for the first time, they will show the setup screens you have permitted, optionally enable supervision, and enroll in Edlink automatically. This method is the only way to optionally configure a device so it cannot be unenrolled by the user at a later time. If you are new to DEP then please read the [Apple DEP Guide](#) for a more detailed overview.

### How to set up DEP in Edlink

- Navigate to **Settings > iOS MDM Settings**.

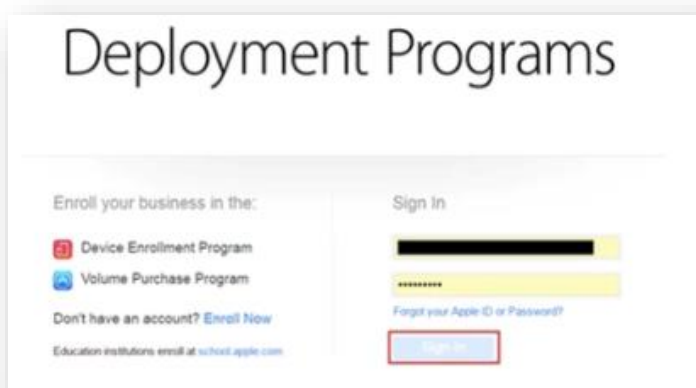

- Download your public key by clicking on the link shown below. This will now be ready for you to upload in the next step.

1. Download your public key: [Impero\\_Edlink\\_Apple\\_DEP\\_cert.pem](#)

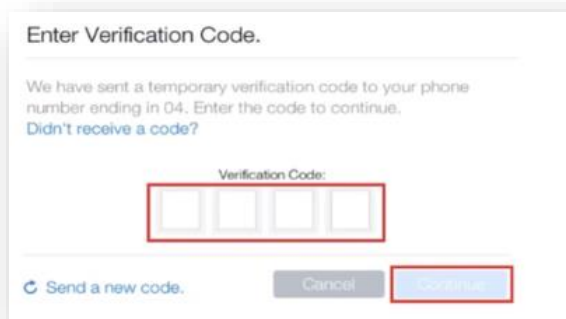

- Then click on the **Apple Deployment Programs** link, leaving the Mobile Guardian dashboard open.

2. Upload your public key to Apple and download your server token: [Apple Deployment Programs](#).

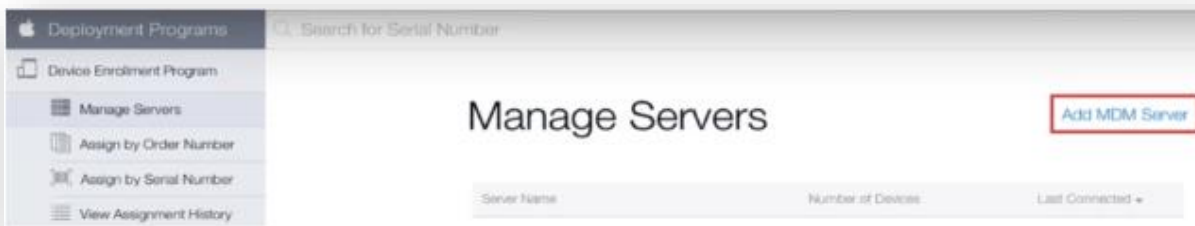

- Enter login details for the **Apple Deployment Programs** page and click **Sign In**. If your school has already been converted to Apple School Manager please go to <https://school.apple.com> and sign in through there and select **MDM** from the left hand menu. The rest of these instructions use images from the legacy <https://deploy.apple.com> service but the same principles apply.

- Enter the verification code which is sent via text message when logging in and click **Continue**.

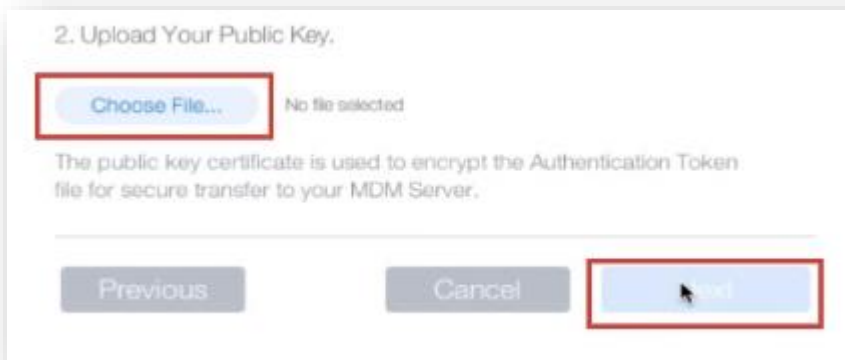

- Click on the **Add MDM Server** link.

- Specify the **MDM Server Name**, e.g. Edlink, and click **Next**. You can also tick **Automatically Assign New Devices** to ensure any devices purchased via an authorised reseller linked to your **Device Enrollment Program** will automatically populate this MDM group. Please see steps below for adding authorised resellers and how to move existing devices

- The Edlink Public Key is now required. Click on the **Choose File...** link, select the certificate file and click **Next**.

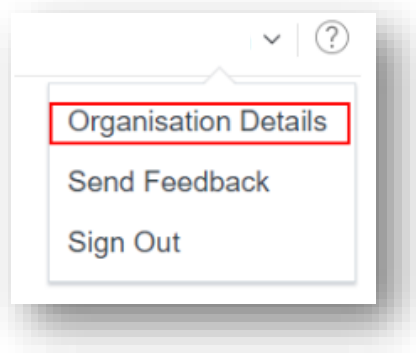

- To download the server token, click on the **Your Server Token** link.

- On the Edlink portal, Navigate to Settings>iOS MDM Settings and click **Upload server token**, and select the certificate to upload it.

### Adding an Authorised Apple Reseller to your DEP

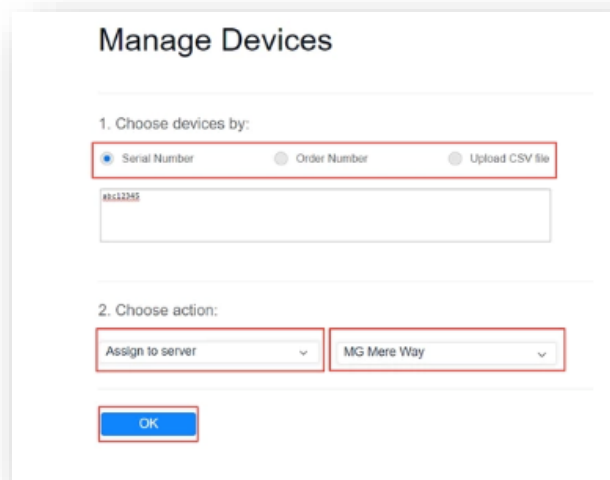

To ensure that new devices are automatically added to the correct MDM group within DEP, please make sure that the authorised Apple Reseller is added to your DEP.

To do this you will need to provide your supplier with your **DEP Customer ID**. To find this go to your **Organisational Details** via the drop down menu in the top right of the screen and choose **Organisation Details**.

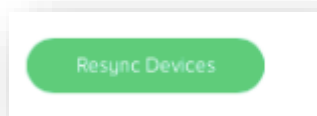

- You will find your **DEP Customer ID** on the left hand side of the next window.
- Your supplier should now send you their **Supplier/Reseller ID**. You add this by clicking the link marked **Add Reseller / Supplier** and enter the details. If you already have DEP devices on your Device Enrollment Program (e.g. for a previous MDM) then you can move these into the correct MDM group for Edlink.

- Make sure you have a list of serial numbers for the devices you want to move / enroll. These can be in a CSV or as a comma-separated list, or as an order number (if purchased directly from Apple).

- Add the serial numbers into the box. Drop down the action list and choose **Assign to server**. Drop down the list of MDM servers until you get to the one that you created for your Edlink, then click **OK**. Once this has been done, or additional devices have been purchased and added via your reseller/supplier, then please ensure you click on **Resync Devices** on the Edlink Portal.

- When complete you will see additional devices in your device list, they are greyed out and you cannot view further details. Once the devices are activated and enrolled, you will be able to see full details of the device.
