

# PRINTFLEET®

The following document provides an overview of DCA Pulse for Mac operating systems including requirements and a step-by-step guide to installing the data collection agent.

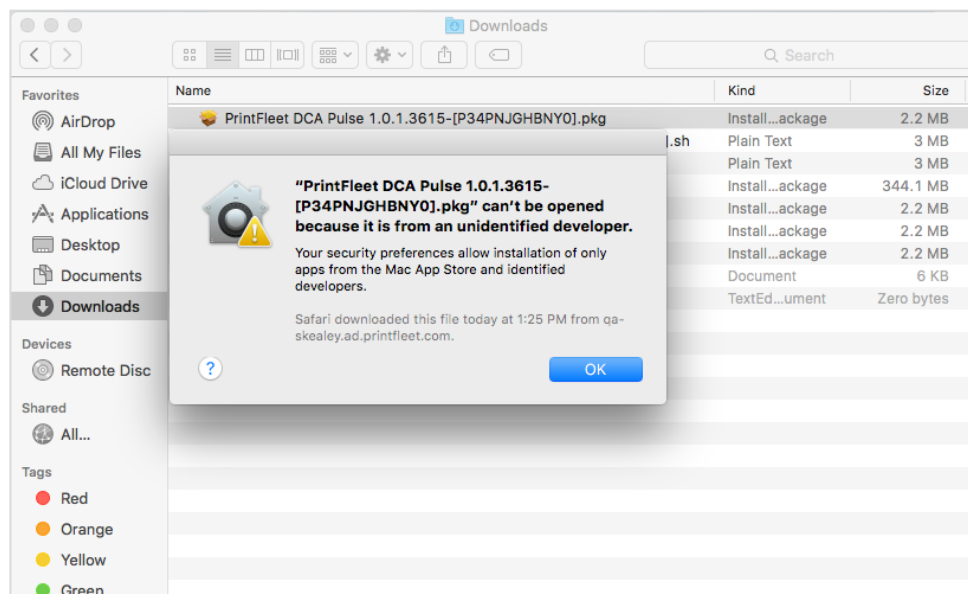

## Overview

DCA Pulse 1.0.1 features an installer with a user-friendly interface which includes a simple walkthrough for installing DCA Pulse on a Mac operating system.

DCA Pulse is the first application PrintFleet has developed for Apple platforms and we are in the process of acquiring an Apple Developer Certificate. The certificate recognizes PrintFleet as a certified developer on Apple platforms. In the meantime, it is important to note that there are no inherent security implications associated with installing DCA Pulse on Mac OS X without a certificate.

## Unrecognized Applications

Apple does not allow unrecognized applications to run by simply double clicking them. If you do double click the application, a pop-up will appear indicating that your security preferences will not allow the install to continue.

Below we have provided the recommended install process to use until PrintFleet receives a certificate.

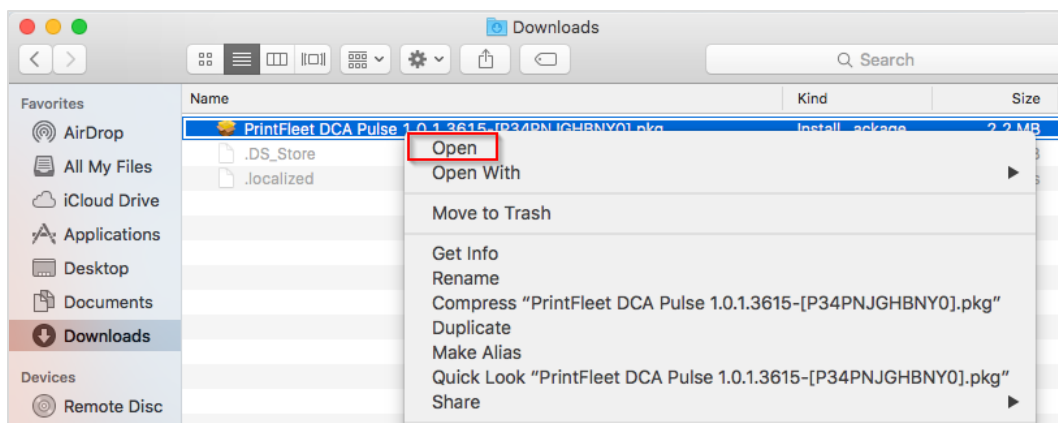

## Requirements

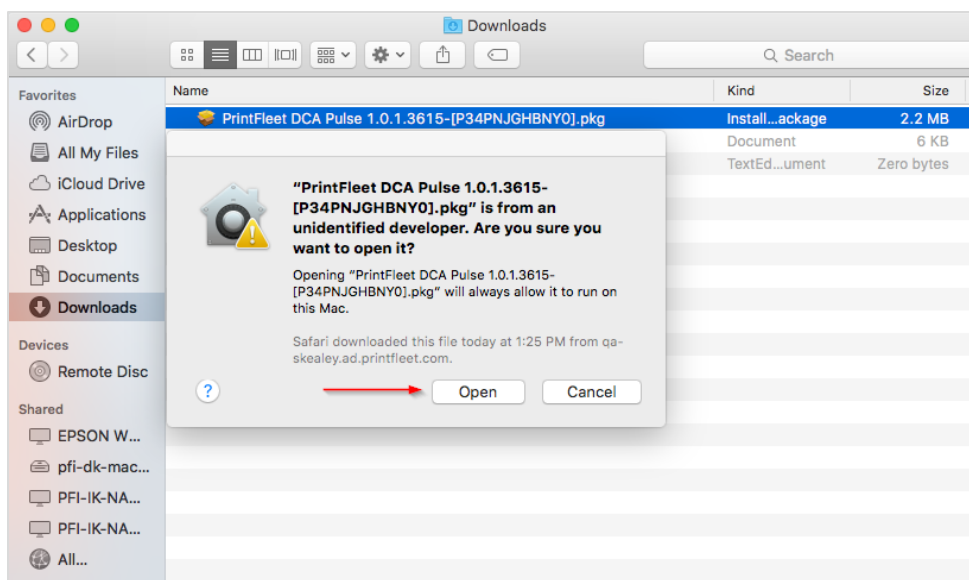

- macOS Sierra (x64)
- Mono 4.4 or above ([click here](#) for OS-specific download instructions)

## Install Steps

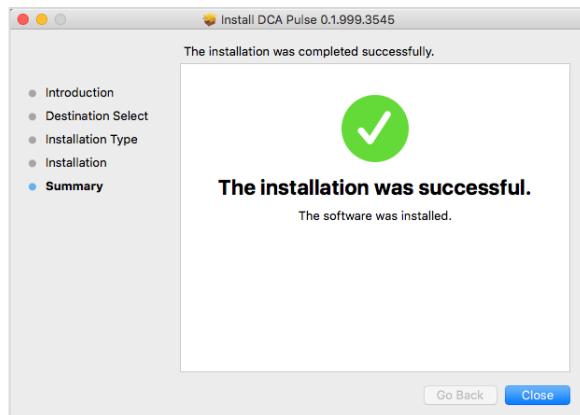

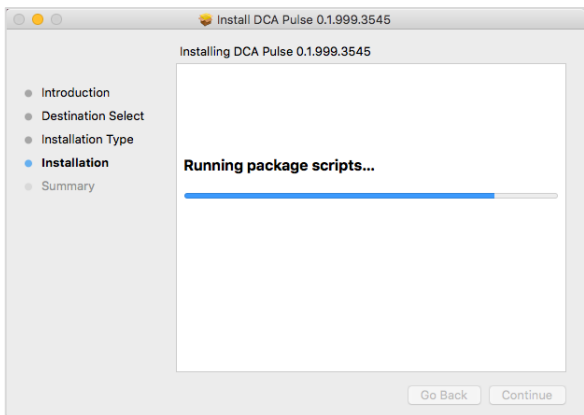

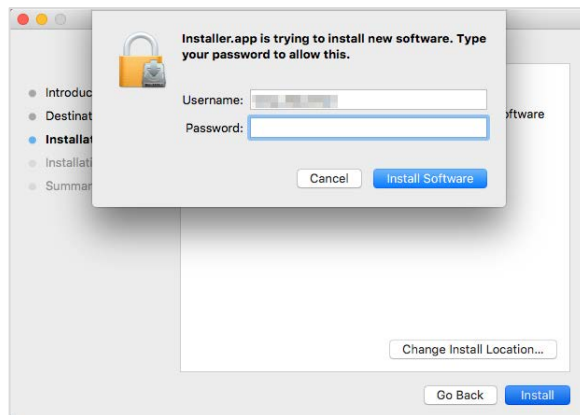

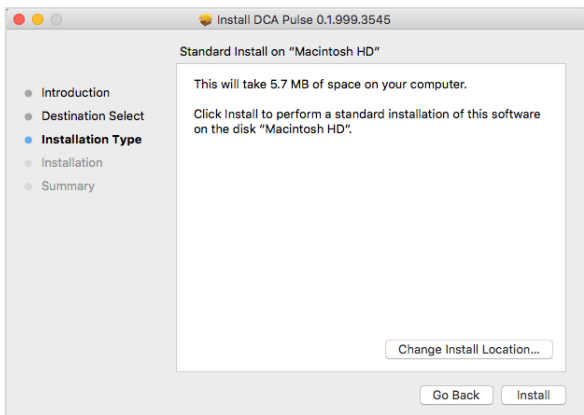

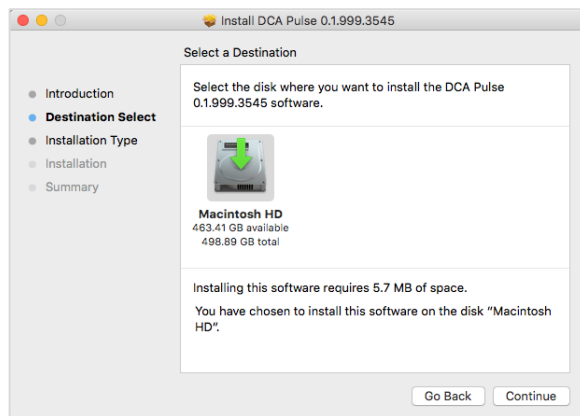

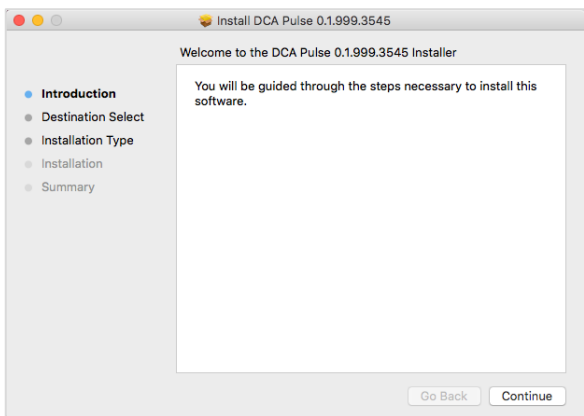

1. Right click the install package.

2. Click 'Open.' You will receive a prompt regarding security preferences with another 'Open' option.

3. Click 'Open.' The installer will open and you can proceed with the installation. See images below.
