

## Password Protection Policy

### Last Update Status

Updated October, 2017

#### 1. Overview

Passwords are an important aspect of computer security. A poorly chosen password may result in unauthorized access and/or exploitation of our resources. All staff, including contractors and vendors with access to systems, are responsible for taking the appropriate steps, as outlined below, to select and secure their passwords.

#### 2. Purpose

The purpose of this policy is to establish a standard for creation of strong passwords and the protection of those passwords.

#### 3. Scope

The scope of this policy includes all personnel who have or are responsible for an account (or any form of access that supports or requires a password) on any system that resides at any facility, has access to the network, or stores any non-public information.

#### 4. Policy

##### 4.1 Password Creation

**4.1.1** All user-level and system-level passwords must conform to the Password Construction Guidelines.

**4.1.2** Users must use a separate, unique password for each of their work related accounts. Users may not use any work related passwords for their own, personal accounts.

**4.1.3** User accounts that have system-level privileges granted through group memberships or programs such as sudo must have a unique password from all other accounts held by that user to access system-level privileges. In addition, it is highly recommend that some form of multi-factor authentication is used for any privileged accounts

##### 4.2 Password Change

**4.2.1** Passwords should be changed only when there is reason to believe a password has been compromised

**4.2.2** Password cracking or guessing may be performed on a periodic or random basis by the Infosec Team or its delegates. If a password is guessed or cracked during one of these scans, the user will be required to change it to be in compliance with the Password Construction Guidelines.

##### 4.3 Password Protection

**4.3.1** Passwords must not be shared with anyone, including supervisors and coworkers. All passwords are to be treated as sensitive, Confidential information. Corporate Information Security recognizes that legacy applications do not support proxy systems in place. Please refer to the technical reference for additional details.

**4.3.2** Passwords must not be inserted into email messages, Alliance cases or other forms of electronic communication, nor revealed over the phone to anyone.

**4.3.3** Passwords may be stored only in "password managers" authorized by the organization.

**4.3.4** Do not use the "Remember Password" feature of applications (for example, web browsers).

**4.3.5** Any user suspecting that his/her password may have been compromised must report the incident and change all passwords.

**4.4** Application Development Application developers must ensure that their programs contain the following security precautions:

**4.4.1** Applications must support authentication of individual users, not groups.

**4.4.2** Applications must not store passwords in clear text or in any easily reversible form.

**4.4.3** Applications must not transmit passwords in clear text over the network.

**4.4.4** Applications must provide for some sort of role management, such that one user can take over the functions of another without having to know the other's password.

**4.5** Multi-Factor Authentication

**4.5.1** Multi-factor authentication is highly encouraged and should be used whenever possible, not only for work related accounts but personal accounts also.

## 5. LastPass

**5.1** LastPass or an equivalent password sharing/storage application is used by the organisation for any shared or managed accounts

**5.2** LastPass will be monitored and managed by the InfoSec team to ensure access restrictions are regularly applied

## 6. Policy Compliance

**6.1** Compliance Measurement The Infosec team will verify compliance to this policy through various methods, including but not limited to, periodic walk-thrus, video monitoring, business tool reports, internal and external audits, and feedback to the policy owner.

**6.2** Exceptions Any exception to the policy must be approved by the Infosec Team in advance.

**6.3** Non-Compliance An employee found to have violated this policy may be subject to disciplinary action, up to and including termination of employment.
