

DAS-SQL Prerequisites

(NOTE: After each step please restart the computer if prompted to do so.)

A) .NET 4.0 (Required on both Server and Client PCs)

.NET 4.0: <http://www.microsoft.com/download/en/details.aspx?displaylang=en&id=17851>

- 1) Download and run each installer, which require no configuration during installation.

B) SQL Express 2008 R2 or 2012 (Required on Server only)

<http://www.microsoft.com/express/Database/>

- 1) Download the appropriate installer by clicking "32-bit" or "64-bit" on the right side.
- 2) During installation, ensure these instructions are followed:
 - *On the setup screen titled "SQL Server Installation Center", select "New installation or add features to an existing installation".*
 - *On the setup section titled "Feature Selection", check everything and continue.*
 - *On the setup section titled "Installation Rules", fix any items marked with a red "X" symbol and continue.*
 - *On the setup section titled "Instance Configuration", select "Default instance" and continue.*

C) Microsoft Visual Studio 2010 C++ Redistributables (Required on both Server and Client PCs)

<http://www.microsoft.com/download/en/details.aspx?displaylang=en&id=5555>

- 1) Download and run the installer, which requires no configuration during installation.

D) Windows Updates

- 1) Run Windows Updates on the PC after all the above items are installed to ensure security patches and fixes are applied.
