

## EveryCloud Technologies Global Data Center Placement

EveryCloud Technologies currently provides email filtering services for MSP's, Partners and direct customers globally in every continent.

As such, EveryCloud Technologies has deployed data centers strategically within Europe, for maximum global reach and minimum latency impact.

Each of EveryCloud Technologies Data centers are ISO certified and must adhere to the strictest data protection act in the world, which is currently the German data protection act.

In 2016, EveryCloud Technologies plans to begin the construction of two new data centers in the US and Australia

**Facts:**

- As our data centers are currently placed centrally, latency of email delivery is at an absolute minimum.

**Latency Table (accurate of October 2015)**

Sender	Recipient	Latency Average
US Customer	US Customer	2.5 Seconds
US Customer	European Customer	2.0 Seconds
European Customer	US Customer	2.0 Seconds
European Customer	Australian Customer	2.3 Seconds
Australian Customer	US Customer	2.5 Seconds

- All of EveryCloud Technologies data at rest; (email archive data) is fully encrypted, in line with US HIPAA regulations.
- EveryCloud Technologies has the ability, if requested, to provide mandatory TLS encryption from EveryCloud Technologies email filtering system to the intended recipient (point to point), in line with HIPAA data transit regulations
