Vision

search, browse, explore & share
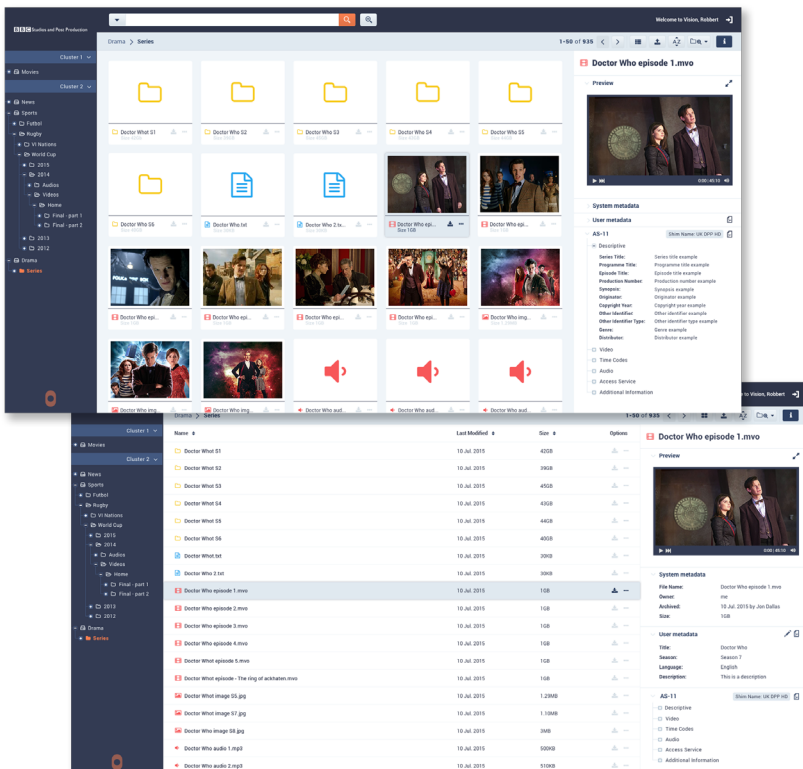

ObjectMatrix

Search, access and share your content with ease

Being able to quickly search, view and share your media assets no longer requires complex to install, learn or control software but can now be carried out via a beautiful web interface from Object Matrix: MatrixStore Vision. Seamlessly integrated with MatrixStore it uses the power of Process-in-Place to examine and enhance metadata and then allows any authorised user to quickly search, preview and share assets using only their web browsers.

Vision is a powerful search tool that looks at any metadata users added during the ingest of the assets as well as metadata extracted from the assets themselves. In particular, Vision is aware of AS11 metadata and provides powerful search options that is domain aware.

If you need a better view of the content in your archive or need to share content with your clients then please get in touch. Please contact the Object Matrix team to arrange a demonstration or to discuss the benefits of the MatrixStore Vision application in more detail.
