

# Integrate Idomoo Personalized Video into Unbounce

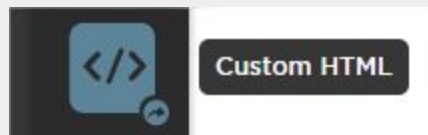

Updated | November 21<sup>th</sup>, 2018

Integrate Idomoo personalized video into Unbounce is made in 3 steps as explained below:

1. Building landing page in Unbounce
2. Setting up a dummy landing page in the Idomoo Storybuilder Suite
3. Generating videos

## Building landing page in Unbounce

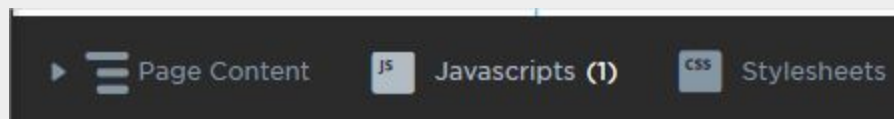

1. Drag the HTML tag and place it where you want the video to be placed in the landing page.
  - a. Find the 'Custom HTML' button in the toolbar on the left side in the landing page editor (second button from the bottom):

- b. Copy the code below into the HTML box and click 'Save Code'.

```
<div class="player-box">  
<div class="player idm-player"></div>  
<div id="playerButton" class="player play-button" onclick="loadPlayer();" >  
</div>  
</div>
```

2. Add the player code below
  - a. Find the 'Javascrpts' button in the bottom toolbar

- b. Give the script indicative name (i.e Player code)
- c. Paste the code in the text box
- d. Click 'Save Code'
- e. After saving you'll be able to see (1) near the 'Javascrpts' button (same as in the image above). This indicates how many scripts you have in your landing page.

- f. If you preview the landing page you'll be able to see Idomoo's demo video. This will later on be replaced automatically with your video.

Player code:

```
<script>
var myEnvironment = 'https://idoplayer.idomoo.com/19/';
window.IdmEngineCallback = function(){
  Idm.Engine.init({
    domain: myEnvironment,
    url:
'https://s3.amazonaws.com/web-assets.idomoo.com/production/demo_video.mp4',
    "analytics": [
      ["cls-button-1", "Button1"],
      ["cls-button-2", "Button2"] ],
  });
};
(function(d, s, id){
  var js, fjs = d.getElementsByTagName(s)[0];
  if (d.getElementById(id)) {return;}
  js = d.createElement(s); js.id = id;
  js.src = myEnvironment + '/assets/js/eng.js';
  js.async = false;
  fjs.parentNode.insertBefore(js, fjs);
})(document, 'script', 'idomooEngine');
</script>
```

## Setting up a dummy landing page in the Idomoo Storybuilder Suite

Go to the Landing page builder

- a. Create a new landing page
- b. Name your landing page
- c. Go to the customization tab
- d. Insert the URL where the landing page will be hosted. This is taken from Unbounce:

- The landing page URL can be traced under 'Page Overview' in Unbounce.

- Make sure to keep this part `?url=<VIDEO_URL>` like so:

At the page, you will be able to create the perfect experience for your customers.

BASIC SOCIAL FOOTER SURVEY CTA OVERLAYS FONT **CUSTOMIZATION**

Connect your landing page to a custom domain

Landing page URL:  
`http://learn.idomoo.com/test-test/?url=<VIDEO_URL>`

## Generating videos

- e. Choose your storyboard
- f. Choose your landing page
- g. Press generate
- h. Download CSV
- i. Insert data
- j. Upload CSV back to the Storybuilder
  - Go to 'History' page to track your batch's progress
  - When a batch is in status 'Done' you'll be able to download the Personalized video url file (PURL) where you'll find your landing page with the personalized video.
