

How to Establish a PPPoE session with a MAC computer.

1. Go to the **Apple** menu and choose **System Preferences**.

2. Double-click the **Network** icon in the **Internet & Wireless** section.

3. In the left-hand panel you will see listed Ethernet, AirPort, etc. Click the "+" sign under that panel.

4. In the window that appears, supply the following information:

Interface	PPPoE
Ethernet	Ethernet
Service Name	Active Utilities

Click the **Create** button.

A connection called **Active Utilities** will be added to the left-hand panel.

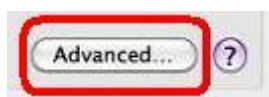

5. Click on the Active Utilities entry and supply the following information:

PPPoE Service Name	Blank
Account Name	Your Active Utilities User ID followed by @activeutilities.com.au * Enter your User name in lower case (small) characters E.g. ab3c-defg@ activeutilities.com.au
Password	The password for your Active Utilities User ID * Enter your Password in lower case (small) characters
Remember this password	arbitrary
Show PPPoE status in menu bar	Check this

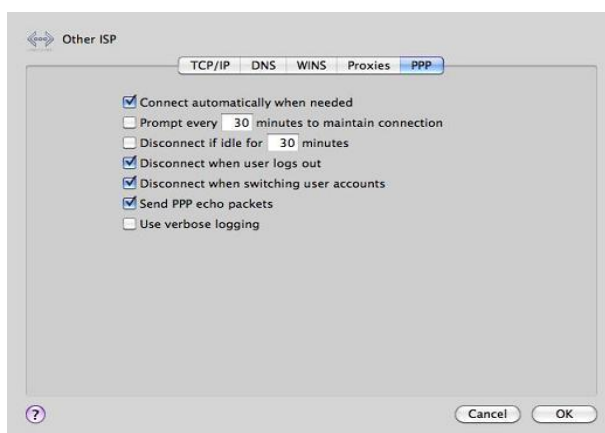

6. Click the **Advanced** button.

7. Click the **PPP** tab and supply the following information:

Connect automatically when needed	Check this
Send PPP echo packets	Check this
All other check boxes are arbitrary.	

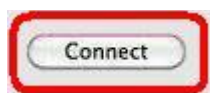

8. Click the **OK** button.

9. Click the **Apply** button.

10. Click the **Connect** button.

11. A connection should now be established between your computer and the Internet. Open a Web browser and start viewing Web pages.
