

ORDER MANAGER

This helpful tool forms part of our Trading and Planning module and allows you to create and communicate your orders with your suppliers.

FEATURES INCLUDE:

- ✓ Create standardised templates for purchasing orders, sales orders and stock transfer orders. Add information and quickly update whenever specific orders are being issued by the system.
- ✓ Automatically create sales orders, purchase orders and stock transfer orders whenever a sale, purchase or stock transfer is logged on the system.
- ✓ Issue these orders using the system to input the order details including quantities and prices. These can be sent as pre-confirmed orders or negotiation orders which allows suppliers/customers to respond with requested amendments.
- ✓ Once confirmation is received back from the supplier, Process the actual quantities of the order on the system and automatically generate pricing using our clever pricing grid.

- ✓ Easily view any received orders including products and prices requested. Then attach actual amounts supplied against the initial order for clear visibility.

Our Trading and Planning module with each of its tools interconnects and integrates seamlessly with our Supply Management modules and Quality Management modules and are available on the Foods Connected single pane of glass platform.
