

# COST AND YIELD MANAGER

This helpful tool forms part of our Trading and Planning module and allows you to manage costs, measure profitability based on real figures and improve production planning.

## FEATURES INCLUDE:

- ✓ Create product yield trees with full yield and offcut information to aid with production models.
- ✓ Build in-depth production plans including aspects such as costing scenarios, product confirmations, dispatch orders, intake data and product/financial reconciliations, storing all the information together on the system.
- ✓ Easily view your next steps as each step within the production model process is highlighted enabling you to keep on top of all necessary actions.
- ✓ Import your product prices and use them in your product confirmations as part of your production model.

- ✓ Import your cost prices and input these into your costing scenarios as part of your production model to understand return on investment.

Our Trading and Planning module with each of its tools interconnects and integrates seamlessly with our Supply Management modules and Quality Management modules and are available on the Foods Connected single pane of glass platform.
