

Differences in taxonomy and nomenclature between Ecuador's field guides and the eBird/Clements taxonomy

Birders unfamiliar with recent taxonomical revisions can end up confused and frustrated at all the differences between the English names used in various references. This list provides the names used in the two most commonly use field guides to Ecuador's birds along with the different names used in the current version of eBird. **If you are trying to enter a species into eBird in Ecuador and your species does not appear as an option, chances are this is due to a name change or split and you should be able to find it on this list. In the case of splits, you will have to know where you saw the bird and refer to the geographical notes in order to determine which eBird species (or group) you saw.**

Major birding resources for Ecuador:

The Birds of Ecuador: Field Guide (Ridgely and Greenfield 2001)

Fieldbook of the Birds of Ecuador: Including the Galápagos Islands (McMullan and Navarrete 2013, 2nd edition 2017)

*Note that Ridgely and Greenfield's "Birds of Ecuador" was based on the 1998 AOU Checklist taxonomy, while McMullan and Navarrete's "Fieldbook" largely follows the IOC taxonomy. eBird's bird list is *Compiled by Nick Athanas and Scott Olmstead, based on eBird/Clements Taxonomy. Updated 13 January 2019 using eBird v2018.*
