

Missing a Drive

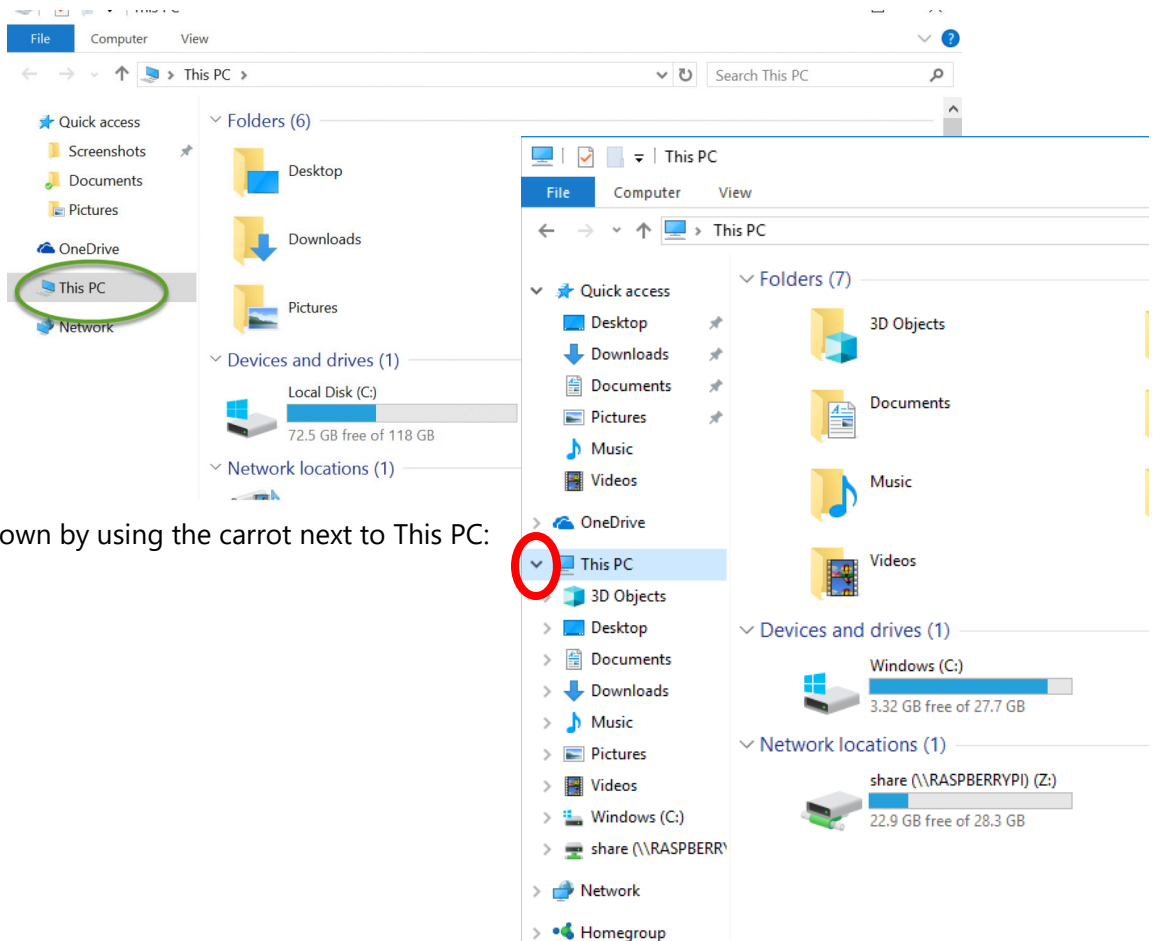

Sometimes when you log into your computer and/or laptop it appears that your shared and/or personal drives may be missing, but many times they are just hidden. Make your drives reappear by following the steps below.

Recovering a 'missing' drive:

1. Open yellow File Explorer
2. On the left-hand side of the file explorer, find 'This PC'
3. Next to 'This PC' make sure that the carrot is dropped down to show all drives, this will make your drives reappear

See pictures below for visual explanation

'Hidden' Drives:

Drives are now shown by using the carrot next to This PC:
