ACTIONABLE CYBER THREAT DATA

# PRIVATE & SAFE INTERNET BROWSING FOR BUSINESSES

Stop **Malware**, **Phishing**, and other  
malicious domains on the internet.

Laptop computers, mobile phones, tablets, gaming devices, TVs, and basically anything that connects to the internet from your network can be used for malicious activity. To make things worse, most businesses can't identify what is connected to and communicating with their network devices. Identifying and blocking malicious traffic needs to be simple and visible.

**Let us protect your users from  
malicious links with privacy**

## Build Safe Browsing for your Business

Enhance your internal security or create value added services and offer your customers better security with real-time threat intelligence. Most MSSPs offer a similar services to offload the costs of hiring expensive security analysts or constructing an SOC. Our threat provides businesses and their security analysts with the data needed to identify and evaluate cyber threats, and develop the tools their customers need to protect their digital infrastructure.

With threat data and analytics you can protect your users from accessing malicious sites, provide a custom warning label to reinforce branding, and integrate valuable threat data into your existing network security platform There are also many devices that are pre-configured for access to threat intelligence data out of the box, allowing for easy configuration.

Stopping traffic to known malicious sites means protecting your users and providing value without sacrificing valuable time and money on expensive security analysts after machines and networks become compromised by threats. Better data and visibility means better protection.
