

How to fix a loss of supervision on a wireless sensor

Round Sensor (NOWDSF360)

Necessary Equipment

- 3V CR2450 Battery
- Phillips precision screwdriver
- Flat precision screwdriver
- Magnet

Procedure

1. Remove the pads under the wireless sensor tabs
2. Unscrew the 3 small screws from the sensor tabs
3. Lift the top shell of the sensor
4. Remove the CR2450 battery by lifting it with the flat screwdriver
5. Heat up the battery for a few minutes
6. Put the battery in the space provided, making sure to see the positive side
7. Replace the top shell on the sensor making sure the gasket is in place
8. Screw the small star screws
9. Replace the pads in the sensor tabs
10. Use a magnet and tap it against the mark on the side of the sensor while being close to the Nowa 360 panel.
11. If the magnet is strong enough, it should send a tamper alarm and restore the low battery in the control panel state.
12. Use the "Reset" button to cancel the alarm.
