

## HD Radio: Importer Service Tokens Expiry

The tokens are from first early implementers and are old. Below is data to replace the service tokens with the expired tokens. Simply open Webadmin on the v4.4.7 importer. Once open, navigate to configurations, then open services in the submenu. This will display all the AE data services and their associated tokens. Select a service to edit, then click on the edit button towards the right-hand side of screen. This will allow you to now edit the service token. Copy and paste from the spreadsheet the new service token. Once done, click save. The importer will display a message stating the service was edited successfully. Once this is done for all the AE data services. Exit out of Webadmin. Go to importer control panel and stop and restart the importer. The tokens will have then been updated.
