

IGOR 5.4.0 RELEASE NOTES

May 22nd, 2020

New Features and Enhancements

- **Network Nodes and Device Nodes show up as device objects**

General

- Major performance enhancements have been added to support enterprise installations.
- Added precision to decimal levels on the space page

Bug Fixes

- Fixed an issue where decimal levels were displaying imprecisely on space page.
- Fixed an issue where device type was being truncated on the log detail page.
- Corrected the start time on the log search page.
- Fixed an issue where the log detail page was duplicating messages that were copied to the clipboard.
- Fixed an issue where the gateway wasn't correctly removing spaces from local storage on receipt of runtime errors.
- UI error messages now display units consistent with their input.
- Fixed an issue where backups would not upload to the cloud in some cases.
- Fixed an issue where activating an actuator command without a value would cause the page to crash.
