

IGOR 5.5.0 RELEASE NOTES

08/14/2020

New Features and Enhancements

- Added the ability to enable or disable Webhooks
- Added the ability for devices and spaces to display custom events on the space page
- Added a webhook for removing a device from a space

General

- Improved performance on the manage devices page
- Increased default light level to 80%

Bug Fixes

- Fixed an issue that caused events to sometimes be dropped from the table on version upgrade
- Fixed a CoAP issue that caused an error on gateway installation
- Fixed an issue where pausing automation was not working while an action set was being executed
- Fixed an issue that caused some device nodes to not be deleted when deleting all nodes from the gateway.
- Fixed an issue where the gateway API was sometimes not including tags in certain GET calls
- Fixed an issue in commissioning wizard where the unassigned lights counter was not decrementing correctly.
