

# IGOR 5.7.0 RELEASE NOTES

1/31/2021

## New Features and Enhancements

- Implemented MQTT (Message Queuing Telemetry Transport) which provides reliable bi-directional communication and message delivery between our Gateway and other applications.

Additional information can be found in the following documents:

- Getting Started with MQTT in the Igor Gateway
- How to Install and Configure Mosquitto MQTT Broker
- MQTT Developer guide

## Bug Fixes

- Issue fixed with Gateway version 5.2.1 crashing upon install.
- Fixed issue with invalid error messages appearing.
- Fixed issue with application key not loading in Gateway version 5.6.
- “End Time” field incorrectly reverted back to “local” time when refreshed instead of what was previously selected.
- Fixed issue with Emergency Lighting Service causing excessive CPU usage.
