Congratulations on becoming a Field2Base User!

Before starting the installation process, you will need to update an Application setting to allow the Field2Base (F2B) Android app to install.

The first step is to update your Device's App install settings to allow non-Market apps like the F2B app to be installed.

Go to your **Device's Settings** > Security section and check the "**Unknown sources**" option.

Now, to install F2B Android on your Device, download the App from one of these locations:

For Mobile Phones ...

<http://intranet.field2base.com/support/A57G/Field2Base.apk>

For Tablets...

<http://intranet.field2base.com/support/A57H/Field2Base.apk>

After completing the download, open the **Field2Base.apk** file.

The MEID entered in the Provisioning Ticket should be shown on the Activation screen. Click activate to begin the initialization process.

(If the MEID is not shown, you will need to enter it exactly as it was entered on the ticket.)

Wait a few minutes for resources to download before beginning use.

Please contact us with any questions.
