Good Afternoon,

Please follow the directions below to setup Field2Base on your Windows PC.

Field2Base Installation Guide

Please read section 1 of the attached PDF (Field2Base Installation Guide.pdf) as an introduction on how our software needs to be setup while downloading the installation package below.

Later in the Guide (Section 2.3), it indicates that you need a Field2Base Tablet ID to move on.

Here is the new Tablet ID assigned to **USER'S NAME** (**DEVICE ID**):
ACTIVATION CODE/SERIAL NUMBER

Field2Base Download and Install

Download the installation package (approximately 120MB) from the link below and Save it to your Desktop…

32 Bit: http://intranet.field2base.com/support/Field2BaseInstall533.exe
64 Bit: http://intranet.field2base.com/support/Field2BaseInstall533-64.exe

1. Double click on the Installer .exe you downloaded.
2. It will automatically extract the installation files and start the Install Wizard.
3. Return to the Section 2 of the Guide where you left off.
4. It will walk you through the remainder of the Field2Base Installation.

NOTE: The 64 Bit install does require a manual step to complete the activation process. See the pop up message box from the install or the note in the installation PDF.

You can then delete the installation file from the PC when you complete the setup.
