

Hot Tub Highlights

DIVERSE SEATING ARRANGEMENTS

BUILT-IN STEP

Designed to act as an easy entrance-point to the spa and stippled for a better grip.

NO-FLOAT LOUNGER

An ergonomic No Float lounger that can comfortably accommodate all designed to keep users in place.

CAPTAINS CHAIR

Ideal seating for a strong massage Well outfitted with jets and a comfortable LED headrest.

BARRIER-FREE SEATING

Allows user to stretch out and massage areas not usually targeted as they are not confined to a specifically moulded seat.

OVERSIZED FOOTWELL

Oversized footwell size comfortably accommodates all users feet without contact and includes foot jets.

HYDROTHERAPY JET CUSTOMISATION

Two different styles of jets present in our spas: directional, rotational. Each provides a different feel to the overall hydrotherapy experience.

Adjustable

All jets are individually controlled and adjustable. Includes the ability to increase/decrease the flow of each jet by rotating the faceplate which allows for complete control over the massage.

Directional

Rotational

Interchangeable

Each jet can be interchanged with any other Canadian Spa jet of the same size. This means ultimate individual customisation for every seat in the spa.

Our diverter valve lets you concentrate the full power of our large 5 hp pump to one or both sides of the spa giving you full control of the flow volume.

Every jet is capable of hydrotherapy and equipped with an air control valve. This controls the amount of air mixed into the water to further adjust the massage pressure level and increase blood circulation

MOST EFFICIENT HOT TUB PLUMBING

CAT. NO.	TT506
MODEL	R63MWENB-4728
HP	S.F. RPM 3450/172
VOLTS	230 HZ 60
SF. AMPS	16.4/4.8 PH 1 DUTY CON
MFG#	F17C FRAME 56Y INS CLASS
THERMALLY PROTECTED AUTO CODE A AMB ⁺ PROT. CODE	
CUL US E22922 Made in	
SUITABLE FOR FIELD WIRING	

Our industry leading 15A 5HP 2 speed pump provides more power than any other pump on the market to circulate the spa water and provide a deep hydrotherapy massage.

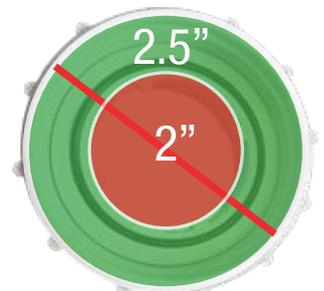

Built in heater provides energy efficient hot water and is controlled by our digital control pack. Energy saving features and a daily purge to keep hot tub pristine.

Components from leading Manufacturers

No right angle restrictions in our plumbing means better flow-through and less resistance placed on the pump.

There is no twisted or rigid corners with our FlowFlex coil pipes, allowing for maximum waterpressure.

Our oversized 2.5" intake is over 35% more efficient than the industry standard of 2" for maximum flow.

FILTRATION SYSTEM

Our Digital filtration system guarantees clear water using 75% less chemicals

1. Pre-Filter - Fine mesh screen to prevent your filters becoming clogged.
2. Silver-Ion - embedded into the filter, acts a natural disinfectant and our Microban® inhibits the growth of bacteria especially
3. when the spa is cycling and not running, bacteria is most likely to grow in the filter and increase chemical demand.
4. Ozone Purifier - Generates Ozone to aid in the oxidation of the spa water & reduce chemical use by over 75%.
5. Mazzei Injector - Produces smaller bubbles and our ozone Mixing Chamber breaks up ozone bubbles to maximum absorption.

ENERGY EFFICIENT INSULATION = Low Cost

Our heat reclamation system works by storing and reusing the heat created by the spa equipment. Most heat generated by the spa is reused efficiently without being wasted.

The waterproof base is designed with high-density closed cell foam and a layer of the same infrared reflective material found on the cabinet walls. This prevents heat loss through the base saving money

High-density closed cell foam surrounds the shell protecting it from heat loss. Cabinet panels includes foam lined with an infrared reflective layer. This creates a hot air barrier to trap and retain heat.

COVER COMPARISON

Canadian Spa Cover:	Other Covers:
25% better insulation	Thinner cover
No heat loss through middle seam	Less heat efficient cover
Easy to lift cover from all sides	No side handles
Skirt completely seals spa	Shorter skirt does not seal spa

Warm air rises and the majority of heat is lost through the top of the spa, this cover helps to retain the heat.
