

Wi-Analys Compliance Verification Receiver

Description

Wi-Analys is a specialized receiver to test and analyze WirelessHART® radio transmissions. The Wi-Analys Compliance Verification Receiver is a significant technology advancement—a tool critical to the development and compliance testing of WirelessHART devices. The new Wi-Analys receiver allows companies designing *WirelessHART* devices to fully test and analyze their WirelessHART radio transmissions.

The HART Wi-Analys Compliance Verification Receiver is designed to capture all 802.15.4 transmissions operating in the 2.4 GHz frequency range. The Wi-Analys software filters the message traffic received from WirelessHART devices. The receiver has the capability of capturing data on 15 WirelessHART channels simultaneously and at a speed of up to 1000 messages per second.

Features

- Designed specifically for testing *WirelessHART* Technology
- Automated applications provide good and bad stimulus to verify robustness of device under test

System Requirements

- Windows 7 version or higher, 32-bit or 64-bit
- .NET Framework 4.6.1
- USB 2.0 Port

Part Warranty

- 1 year parts warranty against manufacture defect

Kit Components

Qty	Item	Rev. No.
1	Wi-Analys software	2.2
1	Wi-Analys Network Analyzer	3.2
1	USB 2.0 A/B cable	N/A
