

HART EDD Host Test Kit HART Protocol Host Testing

Description

The Host Test Kit tests the functionality of a host and its conformity with the HART EDD Host Test Specifications.

An excellent tool for troubleshooting and debugging, the kit includes Device Support Files and virtual device software for testing to ensure a manufacturer's complete product integration as specified by FieldComm Group's official registration testing procedures.

Features

- Simulated test device application (XMTR-Multivariable).
- Standardized EDD (*.fm8) files for testing purposes with documentation.

System Requirements

- HART DD-IDE (if building custom DD files for testing purposes)
- Standard DD Library (if building custom DD files for testing purposes)

General Hardware Requirements

- PC-compatible Intel Pentium (1 GHz, 1 G Ram) to run the simulated test device application
- Serial Port or USB HART-Registered HART Modem

Kit Components

Qty	Item	Rev. No.
1	XMTR-Multivariable (TP20039)	2.7.7.0
1	EDD Test Library (TP20128)	N/A
1	Documentation for the EDD Test Library	N/A
