

## HART-IP Client UDP/TCP Client Application

### Description

The HART-IP Client is a C# Microsoft Windows® application that uses UDP/TCP to connect to HART devices over HART-IP.

Connect to I/O, Gateways, Multiplexors, or HART-IP enabled field devices, send HART commands and see the responses within the user interface.

### Features

- Provides a simple method of parsing and displaying HART binary messages to a user.
- Examples of UDP communication with a HART-IP device.
- Addressing sub-devices within the network through an I/O device using HART-IP Protocol.
- Full source code project available on GitHub.

### System Requirements

- Microsoft Visual Studio 2015 or 2017
- Apache 2.0 License

### General Hardware Requirements

- PC with Microsoft Windows® 7 or later
- Ethernet Port
