FDIsync for Developers
Secure API for Host Developers

Description

FDIsync for Developers provides a modernized delivery system for Registered FDI Device Packages, FOUNDATION Fieldbus DD/CFF files and HART EDD files. Host application developers can tap into the power of this API for many target applications - enterprise distributions, registries, plant asset managers, cloud gateways, and more! Subscribers will receive updates to the API through the Developer Portal.

Features

- Single cloud repository for all instrumentation files for all protocols
- Automated updates (M2M)
- Updates to FDIsync are instantaneous, no lag between the Product Registry page and the Repository contents
- Secure download and API (JSON/XML)
- Online documentation for the API is available within the Developer Portal

Components

- Archive of all current and previously registered FDI Device Packages
- API Keys via Developer Portal
- Archive of all current and previously registered device EDD files

System Requirements

- Windows® XP or newer
- At least 8 MB free memory

Kit Components

Qty	Item	Rev. No.
1	FDIsync Library (12-month subscription)	N/A
1	FDI Developer Portal +API (12-month subscription)	1.0.0
