

WirelessHART® Test System

Description

The *WirelessHART*® Test System includes wireless access points and test software produced on the Linux operating system that includes the test automation, application layer verification and analysis software for the evaluation of a device’s conformance to the *WirelessHART* Communication Protocol. It plays an integral part in the *WirelessHART* Device Registration program and ensuring device interoperability of *WirelessHART*-enabled devices.

Features

- Designed specifically for testing *WirelessHART* products
- Automated applications provide good and bad stimulus to verify robustness of the device under test

System Requirements

- HART Test System (TK20192 v3.6+)

General Hardware Requirements

- Commercial *WirelessHART* Gateway (required for SLT)
- 1 Registered HART Modem (RS-232)
- Wi-ANALYS Network Analyzer (TK20190)

Part Warranty

- 1-year parts warranty against manufacture defect

Kit Components

Qty	Item	Rev. No.
2	<i>WirelessHART</i> Access Point (TP20091)	2.0
2	USB Cable (TP20609)	2.0
1	<i>WirelessHART</i> Test Applications (TP20093)	1.9
1	Wi-HTEST HART Master (TP20095)	1.9
