

## HART Modem Add-on Pack

### Description

The HART Modem Add-on Pack is required for use with device testing using the [HART Test System](#). If you already have 2 registered HART modems in your possession, you do not need to purchase this add-on. If this is your first time developing a HART product and you do not already have 2 HART modems in your lab, you will need to purchase this pack to complete development. FieldComm Group uses registered HART modems as part of our registration process and therefore are necessary for adequate internal testing of your field device(s). These are commercially available modems from third-party vendors.

### HART Modem ADD-ON PACK (TWO MODEMS)
