Control Panel Customization (Whitelabel)

www.hornetsecurity.com

SIMPLY GOOD NEWS

Control Panel Customization (Whitelabel)

You can customize the Control Panel to embed your company's color, logo and favicon.

Furthermore, you can select a theme for your Control Panel.

The customization is displayed to all users logging in to the domain you provide.

Prerequisites to Customize the Control Panel

- You have an administrator role or a partner role.
- You have provided your domain's certificate to support@hornetsecurity.com.

 **Note:** The certificate must at least support SHA256 and use 2048 bit key length.

- Additionally, you must create a CNAME record for your domain. Otherwise, the URL of the Hornetsecurity Control Panel domain is shown in the browser.

Following a CNAME record is set for the domain **controlpanel.customerdomain.com**

```
controlpanel.customerdomain.com IN CNAME cp.hornetsecurity.com
```

Customize the Control Panel

Customize the Control Panel for your company.

1. Open your Control Panel domain.

 **Note:** You need administration or partner authorization, to customize the Control Panel.

2. Select the domain or the partner role from the role selection, you want to customize the Control Panel with.

 **Note:** You can only change the customization with the selected role.

3. Select the section **Whitelabeling** on the left side.

The customization options appear on the right side.

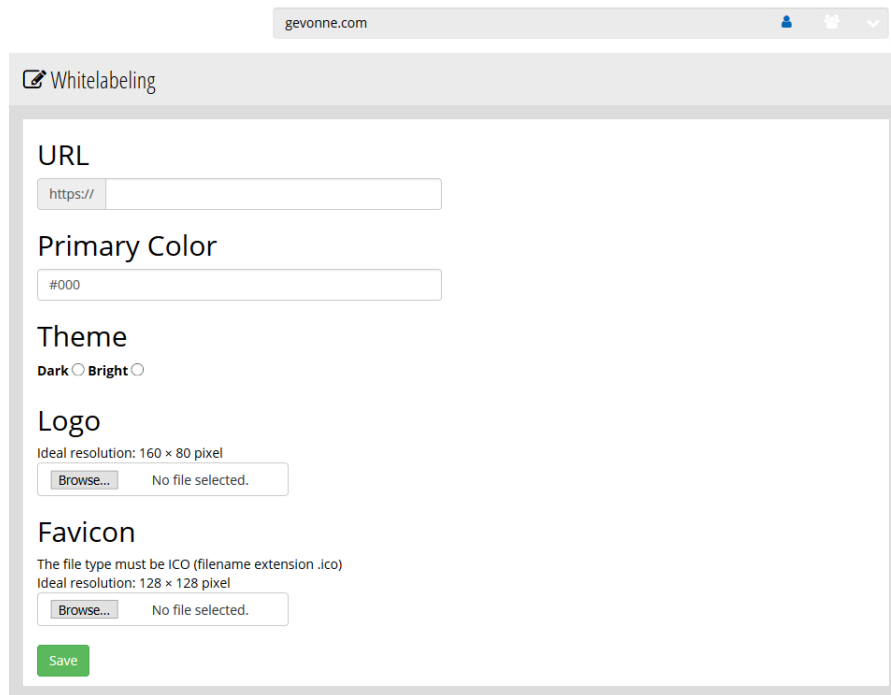

Figure 1: Whitelabeling section of the Control Panel

4. Enter the URL of your Control Panel website in the field URL.

CAUTION: If you change the URL subsequently, you must also update the CNAME record for your domain.

5. Select a color for your Control Panel.

Note: The primary color is responsible for the font color and other design elements.

- a) Click in the field under **Primary color**, to open a color selection.

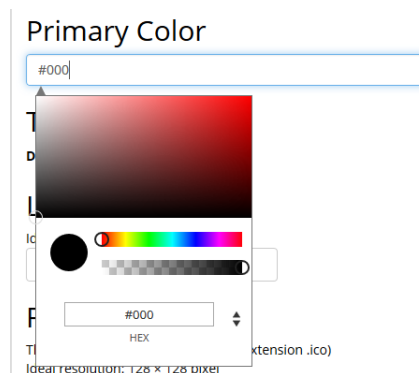

Figure 2: Primary color selection

- b) Pick the desired color.
The selected color is represented in the field as HEX or sRGB.
 - c) Optional: You can insert the color code directly into the field as well.
6. Select the Theme for your Control Panel under **Theme**.
- Activate the radio button **Dark** to select a dark theme.

Figure 3: Dark theme preview

- Activate the radio button **Bright** to select a bright theme.

Figure 4: Bright theme preview

7. Click on **Choose File** under **Logo** to select your Logo.

Note: For the best result, upload a logo with minimum resolution of 160 × 80 pixel.

Figure 5: Logo

8. Click on **Choose File** under **Favicon** to select your favicon.

Note: The favicon must be uploaded in ICO file type (filename extension .ico). For the best result upload the favicon with a resolution of 128 × 128 pixel.

Figure 6: Favicon

9. Click on **Save**, to confirm your customization.

 **Note:** The deployment takes up to five minutes.

10. Refresh the Website to see your customized Control Panel.

 **Note:** You must be logged in to your Control Panel domain to see the customization.

Fallback Design

The fallback design ensures, that the Control Panel is shown without any company specific attributes, in case of misconfiguration.

In the case, that your domain has not been recorded at Hornetsecurity and your configuration cannot be set, an alternative design is selected.

Therefore, the Control Panel gets the dark theme, without any logo or favicon. For the primary color the default Hornetsecurity green will be used.

Contact Data in the Control Panel

The contact data, phone number and email address, is shown in the Control Panel.

Figure 8: Contact data in the Control Panel

If you want to change them, you must provide them in the management module under **contact data** (See: [Supply Contact Data](#) for further information).

Note:

Only the first entry of the company contact data list is relevant for the contact data displayed in the Control Panel.

The changes can take up to 24 hours, to be visible in the Control Panel.

Contact Data Processing

The contact data is processed hierarchically from bottom up.

Underneath a customer are several domains. That customer has provided his contact data on the top level. Thus, every user of the underlying domains gets the contact data of the customer. If contact data for a underlying domain is provided, it will be shown to the users of that specific domain.

Supply Contact Data in the Control Panel

1. Select the partner or domain from the role selection, for that you want to supply the contact data.
2. Select the module **Management**.
3. Select **Contact data** under **Settings**.

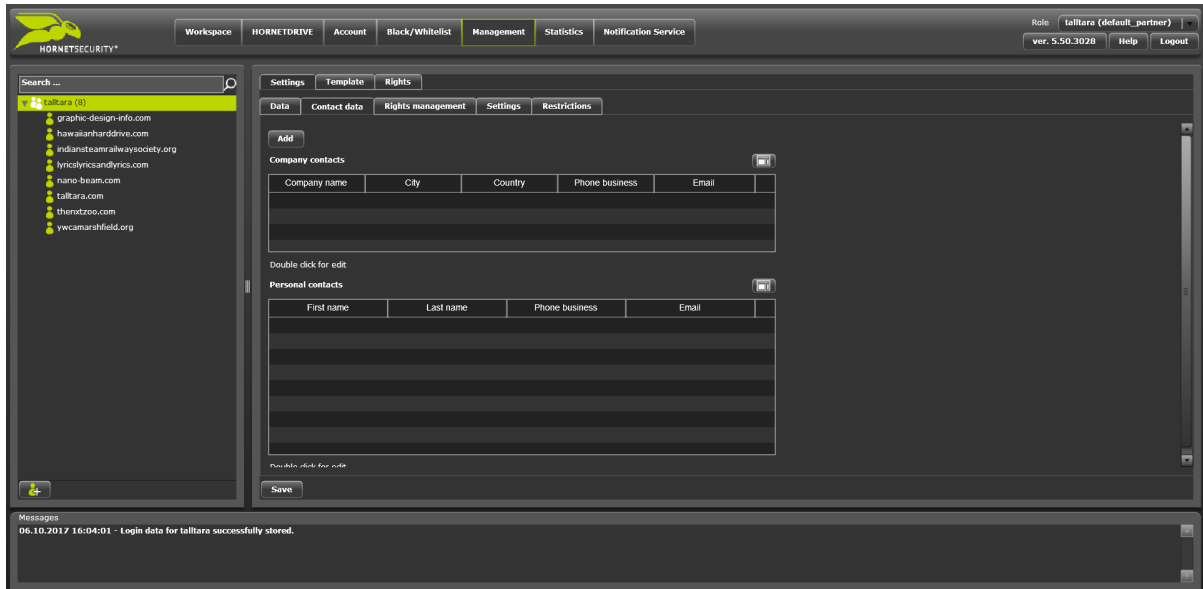

Figure 9: Contact data

4. Click on Add.

A new window appears, where you can enter the contact data into.

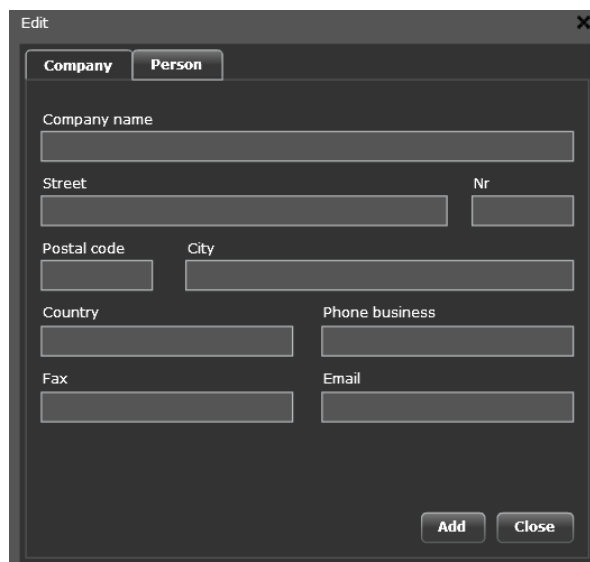

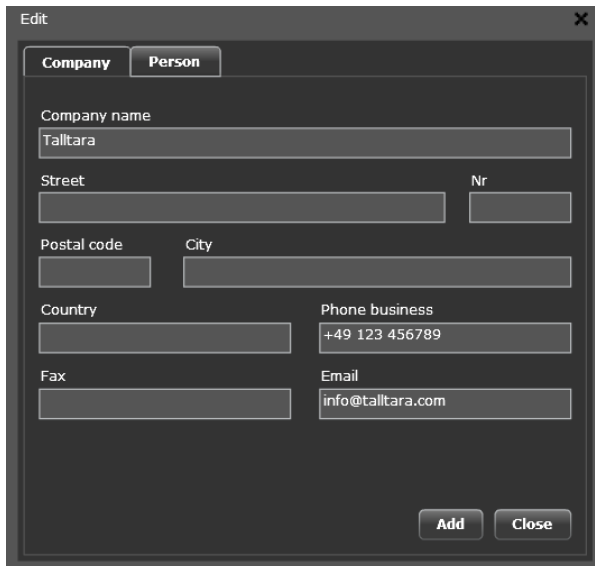

Figure 10: Enter contact data

5. Enter your company's contact data into the fields under the tab Company.

Note: The fields **Phone business** and **Email** are shown in the Control Panel as contact information for your users.

The screenshot shows a dark-themed 'Edit' dialog box with a close button (X) in the top right corner. It features two tabs: 'Company' (selected) and 'Person'. The 'Company' tab contains the following fields:

- Company name: Talltara
- Street: [empty]
- Nr: [empty]
- Postal code: [empty]
- City: [empty]
- Country: [empty]
- Phone business: +49 123 456789
- Fax: [empty]
- Email: info@talltara.com

At the bottom right, there are two buttons: 'Add' and 'Close'.

Figure 11: Company contact data

6. Click on **Add**.
The contact data is provided in respective field in the background.
7. Click on **Close**, once you have finished adding contacts.
8. Finally, click on **Save**.
