Flow™ Bio-Maintenance

Cleans drains and maintains
septic systems without potentially
dangerous chemicals

Flow!™ Bio-Maintenance is a biodegradable, biologically active formula of bacteria species specifically selected for optimum enzyme production. Flow! provides the most efficient breakdown of proteins, carbohydrates, cellulose and fats found in organic waste. The bacteria rapidly digest drain-clogging and odor-causing matter. Odors are not just masked—they are eliminated at the source!

DIRECTIONS FOR USE

Shake well before use.

For slow-running drains: Pour 2 fl. oz. down each drain for 3 consecutive days; use 4 fl. oz. for the slowest drains. Avoid running water down the treated drains for 6-8 hours after treatment.

For drain maintenance: Pour 2 fl. oz. down each drain every 2-4 weeks. Avoid running water down the treated drains for 6-8 hours after treatment.

For septic systems: Use a monthly application of 10 fl. oz. per 500 gallons of septic tank volume. Add directly to septic tank or nearest clean out. If access to either is available, apply to nearest drain. It is not necessary to add Flow! to septic tank if you are performing regular drain maintenance.

Storage and handling: Store in a cool, dry location. Do not freeze. If exposed to skin or eyes, wash thoroughly with water.

Directions For Use

For use in toilet tanks, sump pumps, septic tanks and any other non-drinkable water reservoir hooked up with household drain systems.

Place 1 tablet in reservoir (i.e. toilet tank, sump pump) every 30 days. The beneficial microbes will dose the system for 30 days. Can be used in every toilet tank or the farthest from the outlet/septic tank so that the beneficial microbes will have access to all drain lines.

It is best used for prevention, breaking down sediment in pipes to reduce the chance of clogging. Regular monthly use will aid in keeping drain system clear of clogs and maintenance free. If you have a septic system, beneficial microbes will freely move into system, helping to break down large particles and sludge in septic tank. This helps create an efficient working system.

Storage and Handling

Store in a cool, dry location.

Do not freeze. If exposed to skin or eyes, wash thoroughly with water.

Ingredients: 100% stabilized bacterial spores, cleaning agents and stabilizers.
