

Premium Bird Netting

We've designed our Premium Bird Netting with a smaller-than-usual mesh size (it has just 1/2 in openings), so your crops will be protected, but birds will not be ensnared. Our premium grade netting is easier to handle and to cover plants. It's UV-protected and will last for years when properly used and stored.

Premium Bird Netting comes in various sizes and can also be cut to size without worry of

fraying. It's available in four sizes: 14 ft x 14 ft, 7 ft x 20 ft, 14 ft x 45 ft and 28 ft x 28 ft.

Use Premium Bird Netting to protect fruit trees, berries, gardens, grapevines and ponds. Premium Bird Netting protects your prized fruits, vegetables or ornamentals from birds, Cicadas, Japanese beetles, moths and other medium to large insects as well as rodents and larger animal pests.

Instructions

Fruit & Ornamental Trees

Place netting over the tree. Gather the netting around the trunk, under the tree's foliage, and secure it with nylon ties or twine. Once pest pressure is gone or the tree is ready to harvest, remove the netting to access fruit.

Gardens & Ponds

Place netting over the entire garden or pond and fasten edges securely using stakes or boards. When protecting gardens, use stakes or arches to keep netting raised above plants so critters will not be able to access produce.

Berries & Grapevines

Drape netting over bushes or vines and stake the bottom of the netting to the ground. Boards or rocks may be used to ensure that pests are not able to get under the netting.

At the end of each season, remove netting and brush off any debris. Store in a dry area to increase the life of your netting.

#2982 - 14 ft x 14 ft

#3944 - 7 ft x 20 ft

#3945 - 14 ft x 45 ft

#4635 - 28 ft x 28 ft
