

*The all-in-one seed starting system that gives your seeds a superior start.*

### **Included in Your Kit:**

**1-Water Reservoir Tray:** Offers a constant water source to the Grow Plugs.

**1-55 Cell Growing Tray:** Perfect for seed starting tomatoes, cucumbers, peppers, squash, herbs, & flowers.

**1-Humidity Dome:** Maintains moisture level for seeds required for seed germination.

#### **1- Re-sealable Bag of Grow Plugs-55 Count:**

- ✓ Formulated from environmentally friendly ingredients.
- ✓ Contains natural beneficial bacteria for maximum seed germination.
- ✓ Designed for faster root development.
- ✓ Easier to use and less messy than ordinary growing media.
- ✓ Pre-formed dibble for ease of seed placement with no need to cover with additional potting soil.
- ✓ Allows for efficient, time release of water which in turn will help prevent common water molds & diseases.
- ✓ Use as many or as little of the Grow Plugs as desired. If grow plugs become dry, just re-moisten.
- ✓ Reduces loss due to transplant shock. Sow seed, grow plant, and then plant directly in your garden or container.

### **Directions:**

1. Select a location that is near direct sunlight or preferably under a grow light. Light source should be within 6” of seedlings to ensure they do not get too “leggy”.
2. Place the 55 Cell Growing Tray in the empty water reservoir tray.
3. Moisten the desired amount of Grow Plugs until saturated and place in the 55 cell growing tray.
4. Place 1 seed of choice into each of the Grow Plug dibles.
5. Fill the water reservoir tray approximately ½ full of tap water. The 55 cell growing tray will float in the water reservoir tray.
6. Place humidity dome on the water reservoir tray.
7. When seed has germinated and reaches 1”in height remove the dome.
8. Continue to leave your seedlings in the seed starting tray until they reach appropriate size to plant into your garden or container.
9. After approximately 2 weeks, add a liquid fertilizer to the water tray or spray the leaves with a foliar fertilizer. Follow the application instructions on the label of the liquid fertilizer you use.

**Note:** For faster germination and maximum results it is recommended that you use our #15553 Seedling Heat Mat.

Just keep the reservoir filled with water and the Grow Plugs maintain the proper level of moisture. The Grow Plug's sponge-like properties absorb the necessary amount of water to keep your seedlings well watered without the risk of over-watering.
