GENERAL INFORMATION:

No-Squito!™ Granules is a highly selective microbial insecticide effective against mosquitoes in a variety of habitats. When spread uniformly over the surface of containerized water the granules release a biological mosquito larvicide at the water's surface. This larvicide gradually settles in the water where it is eaten by mosquito larvae growing there. No-Squito!™ Granules may be used in all types of containerized standing water sites where mosquito larvae grow. The granules will give a quick kill within 24 hours. Employ a seven to fourteen day interval between applications.

DIRECTIONS FOR USE:
