# Enz-Rot™ Spray

Helps correct calcium deficiencies in tomatoes as well as cucumbers, melons, and peppers.

Tomato blossom-end rot is a disorder caused by calcium deficiency. This condition is likely when too much nitrogen fertilizer is used on tomato plants. The symptoms of blossom-end rot are round, brown sunken areas on the end of the tomato fruit opposite the stem. As a fruit ripens, the area turns dry and leathery. This can occur after a period of rapid growth followed by dry conditions, or in periods of heavy rain that caused calcium to leach from the soil.

## **KEEP OUT OF REACH OF CHILDREN**

### **PRECAUTIONARY STATEMENTS:**

May be harmful if swallowed. Avoid contact with skin and eyes. Flush with water if contact is made.

### **DIRECTIONS:**

Mix 2 ounces of Enz-Rot™ Spray with 1 gallon of water. Concentrate makes 8 gallons. During periods of rapid growth or excessive rainfall, spray foliage to point of runoff. Apply every 5 to 7 days during these conditions. Apply in morning or evening to avoid leaf burn.

### **Storage and Disposal:**

Store only in original container, in a cool dry place inaccessible to children and pets and away from food items.

### **Container Disposal:**

Do not reuse bottle. Rinse thoroughly before discarding in trash.
